

ILLINOIS WATER RESEARCH NEEDS  
AND  
A CATALOG OF WATER RESEARCH IN ILLINOIS

Special Report No. 5  
of the  
Illinois State Water Plan Task Force

Printed by  
The Water Resources Center  
University of Illinois at Urbana-Champaign  
Urbana, Illinois 61801  
March 1983  
UILU-WRC-83-0013

## ABSTRACT

This report was prepared to (1) help identify Illinois water-related research needs; (2) help identify research that may be addressing those information needs; and (3) help stimulate research in areas where information is needed. Section I is a summary of the research needs identified by agencies of the Illinois State Water Plan Task Force. Section II is an inventory of current research projects being conducted in Illinois that was compiled by a survey of state agencies, universities, and consulting firms. A subject index is provided.

KEYWORDS: Research needs, Research catalog, Research inventory, Water resources planning, Illinois State Water Plan

## ACKNOWLEDGEMENTS

The State Water Plan Task Force and the Water Resources Center wish to thank the many speakers and respondents who contributed to the Water Resources Center's annual meeting on May 17, 1982, and to the research needs section of this report: Ross J. Martin, Engineering Experiment Station, University of Illinois at Urbana-Champaign (UIUC); David Farrell, Illinois Department of Commerce and Community Affairs; Stanley A. Changnon, Jr., Richard Schicht, and Michael Barcelona, State Water Survey Division, Illinois Department of Energy and Natural Resources (ENR); Marvin Hubbell, Illinois Department of Agriculture; Robert Walker, Cooperative Extension Service, UIUC; Marlowe Thorne, Department of Agronomy, UIUC; Larry Toler, U.S. Geological Survey; William C. Ackermann, Department of Civil Engineering, UIUC; Don Vonnahme, Division of Water Resources, Illinois Department of Transportation; Gregg Tichacek, Illinois Department of Conservation; Robert Gorden, Natural History Survey Division, ENR; William Frerichs, ENR; Keros Cartwright, State Geological Survey Division, ENR; and William W. Rice, Illinois Environmental Protection Agency.

Thanks are also given to the many researchers and department heads who responded to the survey questionnaire for the "Catalog of Water Research in Illinois."

This report was compiled and edited by Glenn E. Stout and Richard Buhr, Water Resources Center, UIUC. It was reviewed by members of the State Water Plan Task Force.

## INTRODUCTION

Early in 1982, the Illinois State Water Plan Task Force identified a number of problems in water resources planning and operation that significantly affect program administration. These issues were designated "operating issues" because they relate to ongoing programs and procedures.

One operating issue that the task force selected for further study was water resources research. In studying water plan issues, task force members have identified many areas where research is needed to provide information for developing state water policies and for improving management of the state's water resources. Recognizing that some research is being conducted by faculty members of the state's universities and by personnel of most of the task force agencies, the task force decided that the present report should be compiled to: (1) identify Illinois water-related research needs; (2) identify research that may already be addressing those information needs; and (3) stimulate research in the areas where information is needed.

The Water Resources Center (WRC), University of Illinois at Urbana-Champaign, was asked to prepare this report. One of the WRC's missions is to help coordinate water research conducted at state educational institutions and to disseminate information on that research. As part of this mission, the WRC holds annual meetings that focus on various aspects of Illinois water research, and the WRC has also published two catalogs of Illinois water research projects in the past. The first catalog, "Water Resources Research in Illinois," was published in September 1967. The second, entitled "Catalog of Water Resources Research in Illinois," was published in July 1977.

## The Report

To prepare the report at hand, the WRC focused its May 1982 annual meeting on the topic of the water research needs of the Illinois state water planning effort. In June it also conducted a survey of state agencies and researchers asking them to report current water resources research projects that they were conducting or supporting. The results of this meeting and survey are reported in the first two sections of this publication.

Section I of this report, "Water Research Needs Based Upon the Illinois State Planning Effort," is a summary of the research needs identified by agencies of the Water Plan Task Force at the WRC's 1982 annual meeting.

Section II, "A Catalog of Water Research in Illinois," is an inventory of current water research projects in Illinois that was compiled from the survey of state agencies and researchers. Twenty-four agencies, universities, and consulting firms responded, reporting more than 160 projects.

The appendix of this report is a subject index to the catalog. This index was organized with the research needs of the State Water Plan agencies in mind. Many, but not all, of the major index entries are taken directly from the issues that the task force is addressing. Other major index entries, however, were chosen to facilitate searches by researchers who may not be familiar with the structure of the task force's plan of study.

## Recommendations

The Illinois State Water Plan Task Force recommends that state agencies, colleges, and universities work closely together to provide research and information for the management of the state's water resources:

1. With the assistance of this report, state agency personnel should contact researchers identified as conducting research relevant to their needs and begin a mutually beneficial dialogue.
2. Researchers at Illinois colleges, universities, and state scientific surveys should consult with state agencies and should begin addressing the research needs of the State Water Plan Task Force.
3. State water resources planners and researchers should continue to meet annually to share information on water resources research and research needs.
4. In light of the current federal philosophy that water resources planning and management are state responsibilities and in light of federal cutbacks in water research funds, the State of Illinois should greatly increase its support of water data collection and research programs, and private industry should begin to sponsor a program of water research in Illinois. This program should (1) address the problems and research needs of local government and agencies managing the water resources of Illinois and (2) provide opportunities for students at our colleges and universities to participate in water resources research to ensure that qualified professionals will continue to be available to Illinois agencies and industries in the future.

## I. WATER RESEARCH NEEDS BASED UPON THE ILLINOIS STATE PLANNING EFFORT

### 1. A SUMMARY OF THE 1982 ANNUAL MEETING OF THE WATER RESOURCES CENTER, UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

On May 17, 1982, the Water Resources Center of the University of Illinois at Urbana-Champaign held its annual meeting at the Illini Union. The theme of the meeting was "Short- and Long-Term Research Needs - Based Upon the Illinois State Water Planning Effort." Members from the Illinois State Water Plan Task Force identified areas of needed research in relation to the state planning effort. Other participants from state and federal agencies and from universities around the state were invited to respond to the prepared presentations of the task force members. This report is a summary of the research needs identified at that meeting and of responses following the meeting.

In addition to specific research topics, several general considerations were brought up at the meeting by various participants.

- A research need of overall importance is the support, maintenance, management, and improvement of an adequate data base. This issue is especially critical at the present time because of budget cuts that will be affecting Illinois's data collection system. Basic data collection programs need the support of the entire research community and should be allowed to compete on an equal basis for research dollars. Any research directed toward methods that would improve the maintenance and support of our water resource data base and efficiencies of data collection are of prime importance. This data base is essential for research, planning, and decision making. A plan for a statewide data and information center to manage data has

been developed by the three scientific surveys of Illinois and is being proposed for state implementation.

- Different problems require different approaches to research.

Structured research programs are needed to address problems such as acid rain or erosion and sedimentation. Other types of problems should be approached largely through unstructured research. Examples of the latter are the problems of barium, radium, and organic compounds in our drinking water or the aquatic biology of our wetlands, streams, lakes, and estuaries. Major well-defined problems may require an interdisciplinary approach.

- Any reasonable plan of water resources research must consider the issue of training water-resources professionals. The universities are the only institutions that can provide this function. Long-term research goals should consider the educational issue.

- There is a need to take an ecosystem approach to research. Too often

addresses the effects of problems rather than the causes.

Integrate economics and ecology in a manner that

considers activities that either

lead to the

toward methods that would improve the  
source data base and  
importance. This data

The following specific research needs are broken down by the eleven issues identified by the State Water Plan Task Force. Although some basic research has been undertaken on many of these issues, it appears that the current state of knowledge should be developed for the use of the public and governmental agencies. The extent of knowledge will vary considerably from one topic to another since some of the suggested research needs are relatively new topics while others have been studied for a number of years. The expansion of our modern manufacturing, energy, and agricultural industries will continue to introduce new chemical and biological products into our environment and place ever greater demands on the region's water resources. The impacts of these demands must constantly be studied and monitored to ensure a safe environment and adequate water resources for the region's future.

## 2. RESEARCH NEEDS IN RELATION TO STATE WATER PLAN EMERGING ISSUES

### 2.1 Erosion and Sediment Control

- A. Research needs for the targeting of resources and the monitoring of progress of Illinois' erosion and sediment control program
1. Verification of computer models for estimating soil erosion and delivery ratios, for selecting priority areas, for measuring the effectiveness of soil conservation practices for typical Illinois watersheds. Determination of how the data obtained for one area of the state can be applied to other areas. (The Blue Creek and Highland Silver Lake watershed projects will establish a base for this effort. As the data become available, its use for other areas of the state will be examined.)
  2. Determination of the contribution of bank and gully erosion and channel scouring toward the sediment load of streams.
  3. Continued investigation of sedimentation rates of Illinois's lakes and reservoirs, especially in northern Illinois where less data is available. This investigation should include pre-treatment and post-treatment studies on lakes that will be affected by a land treatment watershed project to evaluate the effectiveness of applied conservation practices on the sedimentation rate.
  4. Quantification of the sediment carried by streams. (The sediment monitoring network established in 1981 was designed to collect baseline sediment data at approximately 50 stations statewide. Budget reductions have resulted in a reevaluation of the program network and a reduction in the number of sampling stations. The

future of the sediment monitoring network is in jeopardy and unless external support is found it will be discontinued.)

5. Refinement of models to quantify the affinity and the transport characteristics of trace metals and other pollutants with fine sediments. A strategy then needs to be developed to reduce the movements of those pollutants with sediment.

B. Evaluation of conservation and land treatment practices.

1. Evaluation of the effects of reduced tillage systems on water quality, i.e., evaluate how tillage practices resulting from the use of new equipment and the use of new and additional pesticides required for reduced tillage systems affect overall water quality.
2. Determination of the economic impact of reduced tillage systems in terms of the farmer and society.
3. Development of techniques for conserving soil during fall and winter months on moderate slopes that have been planted with soybeans.
4. Evaluation of the combined techniques of zero tillage and the close cropping of soybeans on soil conservation.
5. Benchmark studies, data on lake sedimentation, and a stream sediment monitoring network for evaluating the effectiveness of conservation practices.
6. Examination of the incentive system and strategies for speeding up the adoption of known technologies in conserving soil and improving water quality.
7. Evaluation of structural measures in soil conservation practice.
8. Evaluation of the integration of government programs, such as Payment in Kind (PIK), with soil conservation measures.

## 2.2 Integration of Water Quality and Quantity Management

- A. Improvement of environmental indices for monitoring toxics such as pesticides and industrial toxics.
- B. The design of a groundwater quality monitoring network. The State Water Survey currently monitors groundwater levels from a network of shallow wells in areas remote from pumping centers and from approximately 100 wells in the vicinity of pumping centers.
- C. Development of a program to determine "safe yields" for ground and surface supplies in critical areas and alternative sources.
- D. Development of effective programs and practices to optimize reservoir release management.
- E. Development of economic, environmental, and engineering principles for water-blending practices, using surface/groundwater to augment existing public supply surface reservoirs.
- F. Measurement of the physical, chemical, and biological effects of tow traffic in the Mississippi, Illinois, Kaskaskia, and Ohio rivers. Development and implementation of measures to mitigate these effects.
- G. Development of lock and dam optimization management to include water quality.
- H. Development of regional relationships for riffle pool sequencing in order to better define available habitat for aquatic life. Also relate this information to the development of construction procedures for channel relocations.
- I. Development of ecological classifications for benthic stream macro-invertebrates by stream order and physiographic province.

- J. Development of instream habitat index and associated biological and chemical characteristics for Illinois streams.
- K. Evaluation of water quality improvements resulting from urban storm-water detention.

### 2.3 Protection of Underground Water

- A. Development of adequate characterization methodologies to determine the level of protection desired for underground waters of the state. Underground waters of the state need to be classified into use-classifications that take into account potential as well as current uses and are inclusive of both consumptive and other uses.
- B. Identification and classification of users and uses of underground waters. This includes identifying public and private interests as well as distinguishing between consumptive and nonconsumptive uses. The State Water Survey has been coordinating a statewide program since 1928 with these objectives. Funding support is needed after September 1983.
- C. Development of a resource inventory, which would include the quality, quantity, and location of existing underground waters and their recharge areas and regional flow systems. This inventory should include data and information management as well as resource management.
- D. Development of optimum practices to minimize aquifer quality degradation. This issue includes technical research on interaquifer contamination transfer, interaquifer blending, and sealing of abandoned wells.
- E. Evaluation of the roles and responsibilities of public, private, and governmental interests with respect to underground water.

Determination of the legal definition of water rights and needs at the state level.

- F. Evaluation of the degradation and depletion of our underground waters. This evaluation includes degradation sources, susceptibility, pollution control strategies, adequacy, availability, and depletion.

#### 2.4 Water Conservation

- A. An analytical evaluation of the effectiveness of various water conservation strategies through studies of water usage before and after implementation of the various strategies.
- B. Surveys of the effectiveness of water conservation programs implemented and evaluated in other states in order to learn from their successes or failures.
- C. Development of conservation techniques for "Illinois type" industries.
- D. Development of efficient irrigation technology for Illinois soils and crops.
- E. Investigation of re-use of urban stormwater runoff captured for flood control purposes.
- F. Investigation of economic and social impacts of regulated withdrawals of water in high competition areas.

#### 2.5 Flood Damage Mitigation

The Illinois State Water Survey has received a grant from the National Science Foundation to prepare a comprehensive national plan of research on floods and their mitigation. Results of this study should be looked at closely for those research tasks particularly relevant to Illinois.

Research needs identified by the Water Plan Task Force are the following:

- A. Development of better methods for evaluating the cost-benefits and cumulative impacts of multiple rural levee placements.
- B. Development of better methods for evaluating environmental impacts of various floodplain activities that require permits.
- C. Development of effective programs and practices to optimize reservoir release management for existing dams.
- D. Development of technologies to reduce urban flooding.
- E. Development of more reliable methods for the determination of flood frequency from streamflow records.

## 2.6 Competition for Water

- A. Water supply management.
  - 1. Aquifer development evaluations.
  - 2. Groundwater/surface water interactions.
  - 3. Conjunctive use of groundwater and surface water.
  - 4. Impacts of mining operations on aquifers.
  - 5. Role of desalination technology in water reuse and in areas of highly mineralized and radioactive waters in Illinois
  - 6. Improved reservoir operations.
  - 7. Climatological studies on drought projections-occurrence/duration.
  - 8. Research on physics of clouds for enhancement of precipitation.
- B. Water demand management.
  - 1. Water conservation for Illinois industry.
  - 2. A study of local institutional organizations to manage the use of water effectively.
  - 3. Irrigation.
    - a. Efficient technology.

- (1) Development of efficient water storage, distribution, and collection systems for irrigation water.
- (2) Development of water and energy efficient irrigation technology.
- (3) Refinement of models and data for efficient irrigation management.
- (4) Development of short-term weather forecasting to provide data for use in management models.
- (5) Determination of crops and varieties that respond to irrigation for maximum quality and production.

b. Economic potential.

- (1) Development of economic models to identify acreage and practices with the potential for profitable irrigation.
- (2) Determination of the response to irrigation by soil types.
- (3) Determination of water availability in relation to soil types.
- (4) Identification of long-term weather patterns and development of long-term forecasts to provide data for use in economic feasibility models.

c. Irrigation-related water conflicts.

- (1) Determination of areas where irrigation is likely to expand.
- (2) Identification of areas of potential competition for available water supplies.
- (3) Determination of necessary changes in water use law and institutions to resolve conflicts.

4. Water use projections.

5. Instream flow requirements.
  6. Development of a basic model that will integrate natural streamflow conditions with known withdrawals and return flows.
- C. Administrative capabilities.
1. Improved water law.
  2. Regional allocation methodologies.

## 2.7 Aquatic and Riparian Habitat

### A. Wetlands.

1. Identification of the locations and sizes of Illinois's wetlands and the collection of sufficient information on each of these wetlands to allow the development of a classification scheme with designated priorities that identifies the preservation values and significance of each value in relation to all other values.

### B. Streams.

1. Development of a methodology for the determination of the stream flow levels needed to protect fishes and other aquatic life inhabiting Illinois streams.
  - a. Selection of indicator fish and/or invertebrate species for each of the 18 major basins in the state.
  - b. Development of preference curves for indicator species in relation to flow, substrate, and other habitat requirements.
2. Analysis and evaluation of various habitat enhancement techniques in relationship to the management of both natural and altered channels in Illinois.
3. Development of a method to assess the cumulative impacts of the variety of construction projects that are affecting Illinois streams. (A method to assess at what point the impacts of

construction damage stream ecosystems to the point of no return as natural systems.)

4. Information on the importance of species diversity and the ecological roles and habitat needs of the forage fish of Illinois streams.
  5. Development of regional relationships for riffle pool sequencing in order to better define available habitat for aquatic life. Also analyze this information for use in designing procedures for channel relocations.
  6. Development of ecological classifications for benthic stream macroinvertebrates by stream order and physiographic province.
  7. Development of instream habitat index and associated biological and chemical characteristics for Illinois streams.
  8. Development of long-term studies on large river systems. With funding from the National Science Foundation, the Natural History Survey and other state scientific surveys are initiating a 5-20 year study of basic ecological concepts and the effects of sedimentation, pollution, and users on the Mississippi and Illinois rivers.
  9. Development of seasonal hydrologic relationships to determine the persistence of pools during drought periods.
- C. Large flood control reservoirs.
1. The development of methods for pinpointing the locations of the prime sources of pesticides and heavy metals that contaminate fish flesh and the development of corrective measures to significantly reduce the impact of these contaminants on reservoir life forms.

2. Models of the dynamics of reservoir food chains and species interaction.
3. Information on the influence of water level manipulation on reservoir fish populations and their forage base.
4. The development of effective reservoir habitat enhancement techniques.
5. Refinement of creel census (angler harvest) procedures to achieve efficiency, economy, and accuracy.
6. Investigation of methods of operation that would serve flood control needs with minimum impact on habitat.

D. Inland impoundments.

1. The development of detailed scenarios concerning the influence of pesticides, sedimentation, and erosion on lake ecosystems and the translation of this information into effective, affordable, and socially acceptable management responses.
2. Development of affordable and effective biological control measures for aquatic macrophytes.
3. Analysis of the aquatic species population dynamics that operate in Illinois's glacial lakes and the implications this has for the management of artificial lake environments.
4. Information related to fish stocking policies ranging from interspecific competition and interaction to the most desirable forage base for exotic cool water predator fish such as walleye and musky and the development of artificial spawning habitats for them.
5. The development of methods for pinpointing the locations of the prime sources of pesticides and heavy metals that contaminate

fish flesh and the development of corrective measures to reduce the impact of these contaminants on small recreational impoundments of streams and rivers.

6. Identification of the sources of sediment influx into Peoria lake and the development of cost effective methods to mitigate this problem. Peoria Lake, which is a part of the Illinois Waterway, is a unique water resource serving a large metropolitan area. The lake is used extensively for boating, sailing, skiing, fishing, and other recreational purposes, in addition to serving as a waterway for the transportation of agricultural and industrial commodities. Off-channel areas of the lake are heavily silted up.

#### E. Lake Michigan.

1. Development of effective imprinting methods to ensure the return of spawning adult salmonids to Illinois waters for egg taking.
2. Development of methods to enhance the utilization of Illinois stocked salmonids in Illinois waters.
3. Information on the magnitude of loss of small salmonids due to impingement and entrainment at the various water intakes along the lakefront.
4. Information on the life history requirements and population dynamics of both commercially and recreationally harvested fish species in the Illinois portion of Lake Michigan. Translation of this information into management responses.

- F. Identification of the causes of fish kills, disappearance of desirable flora and fauna, and other environmental degradation so that appropriate mitigative measures can be developed.

## 2.8 Water-Based Recreation

- A. Information on the intensity and diversity of recreational use on Illinois public and homeowner-controlled lakes.
- B. Methods for determining optimum recreational use-carrying capacities on lakes and streams.
- C. Development of techniques for achieving control of recreational use and a concurrent mediation of spatial conflicts.
- D. Examination of Illinois riparian case laws and other case law in the nation to determine the public's rights to access and use water areas for recreation purposes. Determination of IDOC and IEPA's responsibilities for managing these water resources. Determination of riparian landowner liability when public use occurs on an adjacent navigable stream.
- E. Determination of the impact of the barge industry on small boating.

## 2.9 Atmospheric Changes and Management Issues

- A. Research to better define climate-society interactions.
- B. Determination of the types of climatic changes occurring in Illinois and the causes and impacts of these changes.
- C. Determination of the sources, transport, transformation, and deposition of pollutants, plus their impacts on the water resources of Illinois.
- D. Determination of the magnitude of the acid precipitation issue.
  - 1. What is the current trend of precipitation acidity?

2. What is the response of natural precipitation chemistry to increased fossil fuel consumption?
3. What is the response of Illinois waters, soils, weather, and agriculture to various chemical components of precipitation?
- E. Information on the sources, transport, and deposition of pollutants; information on the effects of CO<sub>2</sub> and particulates on climate and, in turn, on the water resources of Illinois.
- F. A ten-year program to determine whether and how precipitation can be increased and by how much. As an alternative, an evaluation of operational rainfall enhancement projects over a three-year period of time should be conducted.
- G. Determination of the environmental effects of rainfall enhancement and the physical, social and economic impacts of enhanced rainfall.
- H. Determination of the effects and frequency of droughts and their effects on public water supplies and navigation.
- I. Determination of climate changes and snowfall changes and whether this is affecting migration from the state. Determine the relationship of snowfall and weather in relationship to roads and construction techniques.
- J. Determination of the possible relationships between weather changes and the future of irrigation in Illinois.
- K. Determination of the impact of increasing urban rainfall on urban flooding and urban stormwater management.

#### 2.10 Drought Contingency Planning

- A. Development of more accurate methods for predicting droughts and determining the rate of incidence of droughts and the probabilities of the durations of droughts.

- B. Development of models for accurate water supply planning that would calculate appropriate supply levels necessary to respond to various degrees of drought.
- C. Determination of the possibility of sustaining conservation measures over a long period of time. Development of effective methods for sustaining conservation measures over a long period of time.

#### 2.11 Illinois Water Use Law

- A. Development of a set of legal principles and factual characteristics that can be used to define public waters in Illinois and indicate the full extent of state water management authority (research is in progress).
- B. Collection of the factual information for individual waters of the state to determine whether such waters can be classified as public with respect to the set of legal principles and characteristics developed to define public waters. Depending on the legal principles and pertinent factual characteristics developed, this research could involve exhaustive historical research, hydrologic evaluations, title searches, and so forth.

### 3. RESEARCH NEEDS IN RELATION TO ONGOING STATE PROGRAMS

#### 3.1 Water Quality

- A. Evaluation of the effect of intermittent discharging and developing substrate for nitrifying bacteria in enhancing the wastewater treatment in lagoon systems.
- B. Evaluation of risks of Naeglora fowerli for recreation and the drinking of thermally enriched waters.

- C. Development of toxicity testing that provides a better estimate of actual instream toxicity.
- D. Research on "Best Management Practices" for application of currently used pesticides.
- E. Development of water/sediment data. Application of existing data to show problem areas, seasonal trends, and regional trends. Development of relationships for lower flows for sediment concentration and turbidity.
- F. Development of procedures to effectively assess site-specific relationships (assimilation) of treated waste effluents discharging into small streams.
- G. Development of demonstration projects to assess the potential of "aquaculture" for treating domestic sewage.
- H. Classification of Illinois streams based on differing responses in terms of toxicity following introduction of substances that are now concentration limited (standards) i.e., heavy metals, etc.
- I. Study of impacts of wastes from water treatment plants discharging to different water courses.
- J. Development of economical alternative methods of waste disposal for water treatment plants.
- K. Investigation of economic and environmental impacts of sewage effluents to receiving waters, if chlorination is discontinued by law.
- L. Evaluation of the necessity of suspended solids standards (30 mg/l or 12 mg/l) in sewage effluents for different streams.

### 3.2 Public Water Supplies

- A. Studies on the economic and technical strategies for defluoridation required by regulations.

- B. Development of disposal alternatives for zeolite softener brine waste.
- C. Determination of sanitary significance of "false positives" for coliform membrane filter technique.
- D. Evaluation of health effects of public water supply operator exposure to low level  $H_2S$ .
- E. Studies on the possibility of augmenting the water supplies of western and southern Illinois. Sufficient water exists in western and southern Illinois, although much of it is too high in salt content to serve some water needs. Research the possibility of using separate water sources (one for nonpotable, one for potable); desalination; interbasin transfers; and alternative sources.
- F. Research on the possibility of artificially recharging aquifers, and research on water reuse for Illinois.
- G. Research on second generation pollutants, the by-products of our efforts to clean up water or air--lime softening sludges high in barium, zeolite brines, flue-gas desulfurization wastes, fly ash, spent caustics, oil/coal development by-products. Drinking water plant operators need to be filled in on the symptoms of serious problems.
- H. Research on lake rehabilitation.
- I. Research on aquifer rehabilitation.
- J. Determination of the locations of alternative emergency water supplies for major population centers.

### 3.3 Miscellaneous

- A. Aquaculture--the use of thermal effluents of utilities, "waste" water

from agriculture and industry, and by-products from agri-energy industry.

- B. Genetic manipulations--development of organisms that can best utilize the available environments, e.g., acid lakes, aquaculture systems.
- C. Research on dewatering lake bottom sediment.
- D. Determination of the optimal agricultural use of lake water and sediments from dredging.
- E. Determination of the impact of lowhead hydropower on navigation.

## II. CATALOG OF WATER RESEARCH IN ILLINOIS

The research projects in this catalog are listed by investigating agency. Most of the projects were considered active as of August 1982. The key below explains the format and the abbreviations used. In addition, a subject index is presented in the appendix.

Researchers and users of research results who have a need for more information about specific projects should direct their inquiries to the principal investigator at the agency or institution listed. There may be other projects in Illinois that are not listed in this catalog. If any have been overlooked, we would appreciate receiving information on them.

## KEY

P.I. Principal Investigator(s)  
S.O.F. Source of Funding  
F.L.C. Funding Level Classification\*  
Dates Inclusive Dates  
Obj. Objectives or Brief Description

\*The following funding classes, while not revealing the exact amount of funding, indicate the scale of the project. The following categories indicate the total amount for the entire grant period (unless otherwise indicated):

A. Under \$10,000  
B. \$10,000-\$25,000  
C. \$25,000-\$100,000

D. \$100,000-\$500,000  
E. Over \$500,000

1. ARGONNE NATIONAL LABORATORY  
9700 South Cass Avenue, Argonne, Illinois 60439

### 1.1

Title: PHYSICAL ASPECTS OF OCEAN KELP FARMING

P.I. J. D. Ditmars and D.-P. Wang, Energy & Environmental Systems  
Division, Argonne National Laboratory

S.O.F. Gas Research Institute

F.L.C. C

Dates: January 1982 through September 1982

Obj: Examination by means of models of the interactions between the physical ocean environment (currents and waves) and man-made kelp farms. In particular, consideration is given to the damping of currents and waves by the farm and the implications of those modifications on environmental impacts.

### 1.2

Title: REGIONAL INFLUENCE OF OCEAN THERMAL ENERGY CONVERSION PLANT OPERATION

P.I. J. D. Ditmars and D.-P. Wang, Energy & Environmental Systems  
Division, Argonne National Laboratory

S.O.F. Office of Ocean Minerals and Energy, National Oceanic and  
Atmospheric Administration

F.L.C. D

Dates: August 1982 through August 1983

Obj: Numerical modeling of a limited-area coastal region in which the effects of intakes and discharges of ocean thermal energy conversion plants are simulated in order to estimate the regional and water column impacts of the large volumes fluxes moved by the plant.

### 1.3

Title: TAGGED DREDGED MATERIAL DISPOSAL EXPERIMENTS

P.I. J. D. Ditmars and D. L. McCown, Energy & Environmental Systems  
Division, Argonne National Laboratory

S.O.F. United States Army Corps of Engineers, Rock Island District

F.L.C. C

Dates: August 1981 through August 1983

Obj: Sand dredged from the Mississippi River in the Gordon's Ferry area was tagged with dyed sand prior to downstream thalweg disposal. Sampling of bottom sediments in the vicinity and downstream of the disposal site provides a measure of the fate of the tagged material.

2. BRADLEY UNIVERSITY  
Peoria, Illinois 61625

2.1

Title: PERIPHYTON ACCRUAL RATES IN A POWER PLANT COOLING RESERVOIR  
P.I. B. J. Mathis, Department of Biology, Bradley University  
S.O.F. Central Illinois Light Company  
F.L.C. A  
Dates: June 1, 1982, through May 31, 1983  
Obj: Plexiglass slides are to be placed at seventeen stations and two depths to correlate periphyton growth rates with light penetration and temperature regimes.

2.2

Title: USE OF HESTER-DENDY SAMPLERS TO DETERMINE DISTRIBUTION OF AQUATIC INVERTEBRATES IN A POWER PLANT COOLING RESERVOIR  
P.I. B. J. Mathis, Department of Biology, Bradley University  
S.O.F. Central Illinois Light Company  
F.L.C. A  
Dates: June 1, 1981, through September 1, 1982  
Obj: Hester-Dendy samplers were located at three depths and seventeen stations. Samplers were exchanged at approximately one month intervals and aquatic invertebrates were removed, counted and identified. Species diversity will be correlated with depth and temperature regimes.

3. DATA RESOURCES, INC.  
24 Hartwell Avenue, Lexington, Massachusetts 02173

3.1

Title: INLAND WATERWAY COMMODITY FORECAST STUDY FOR THE STATE OF ILLINOIS

P.I. Data Resources, Inc.

S.O.F. Illinois Department of Transportation

F.L.C. C

Dates: June 1982 through January 1983

Obj: To develop forecasts of commodities and tonnage to be shipped on the navigable inland rivers of the state, and to identify the extent or size of the hinterland or drawing areas for waterway segments. The results will be used to determine the need for improvements to the waterway system and for terminal facilities to handle the future cargoes.

4. EASTERN ILLINOIS UNIVERSITY  
Charleston, Illinois 61920

4.1

Title: BIOLOGICAL STREAM SURVEY - MATTOON

P.I. L. S. Whitley and L. Durham, Department of Zoology, Eastern Illinois University

S.O.F. Illinois Environmental Protection Agency and City of Mattoon

F.L.C. C

Dates: July 1982 through June 1983

Obj: To determine biological effects of sewage outfalls on two streams near Mattoon, Illinois.

5. GOVERNOR'S STATE UNIVERSITY  
Park Forest, Illinois 60466

5.1

Title: ATMOSPHERIC LOADING IN THE GREAT LAKES REGION

P.I: Herman Sievering, Environmental Science Program, Governor's State University

S.O.F. United States Environmental Protection Agency

F.L.C. D

Dates: October 1, 1981, through September 30, 1983

Obj: To obtain particulate matter elemental and chemical compound data for interpretation in Great Lakes pollution loading network and models. To further our understanding of atmospheric particle exchange at the air/water interface.

6. ILLINOIS DEPARTMENT OF AGRICULTURE  
Emerson Building, State Fairgrounds, Springfield, Illinois 62706

6.1

Title: AGRICULTURAL IMPACT ASSESSMENT OF AN INCREASED LAKE MICHIGAN  
DIVERSION

P.I. Marvin Hubbell, Resource Planner, Illinois Department of Agriculture

S.O.F. United States Army Corps of Engineers

F.L.C. B

Dates: November 16, 1981, through September 30, 1982

Obj: To identify potential impacts to agriculture (cropping patterns,  
drainage impacts, flooding, topography, soil erosion) resulting from  
an increased diversion of Lake Michigan water. Benefits and costs  
will be identified.

7. ILLINOIS DEPARTMENT OF TRANSPORTATION  
2300 South Dirksen Parkway, Springfield, Illinois 62764

7.1

Title: BARGE TERMINAL CAPACITY STUDY: A COMMODITY SPECIFIC APPROACH  
TO PORT PLANNING

P.I. James A. Johnson, Ports Management Section, Illinois Department of  
Transportation

S.O.F. Illinois Department of Transportation

F.L.C. A

Dates: July 1982 through January 1983

Obj: To develop a methodology to estimate the current cargo handling  
capability of river terminals in the state. The methodology will be  
used in conjunction with forecasts of barge traffic to plan for  
necessary improvements to existing terminals and for the development  
of new terminals.

7.2

Title: DIRECTORY OF LAKE AND RIVER TERMINALS IN ILLINOIS

P.I. James A. Johnson, Ports Management Section, Illinois Department of  
Transportation

S.O.F. Illinois Department of Transportation

F.L.C. B

Dates: January 1981 through July 1982

Obj: To prepare a directory of all identified waterway terminal facilities  
in the state that are currently involved in waterborne commerce.  
The purpose of the directory is to assist the state in port and  
waterway planning and to assist potential shippers in terminal  
selection.

8. ILLINOIS ENVIRONMENTAL PROTECTION AGENCY  
2200 Churchill Road, Springfield, Illinois 62706

8.1

Title: COMPARATIVE EVALUATION OF NATURAL AND MODIFIED CHANNEL CHARACTERISTICS TO ESTABLISH WATER QUALITY USE ATTAINMENT

P.I. Doug Crandall, Illinois Environmental Protection Agency

S.O.F. United States Environmental Protection Agency, Clean Water Act

F.L.C. C

Dates: August 1981 through September 1983

Obj: The project will utilize the prior 208 studies on intermittent streams and various intensive stream surveys. These studies will be augmented by site specific studies of various stream systems to define the absolute potential of both altered rural and urban stream segments relative to unaltered segments. The protocol and findings of these efforts will result in formulation and implementation of proposed stream alteration policy.

8.2

Title: DEVELOPMENT OF A WATER QUALITY MANAGEMENT/GROUNDWATER INTEGRATION PROGRAM

P.I. Doug Crandall, Illinois Environmental Protection Agency;  
Jim Gibb, Illinois State Water Survey; and Keros Cartwright,  
Illinois State Geological Survey

S.O.F. United States Environmental Protection Agency, Clean Water Act

F.L.C. C

Dates: June 1981 through September 1983

Obj: This prototype study is a comprehensive review and analysis of the groundwater resources in the Sangamon River Basin. Tasks include analyzing information on aquifer susceptibility and contamination sources, characterizing groundwater flow, conducting trend analysis of water quality data from public water supplies, assessing groundwater use and resource use conflicts, and analyzing the baseflow contribution to surface water quality. This project also includes several tasks needed in working towards a statewide strategy for groundwater management. Tasks include reviewing of the roles of state agencies in groundwater management, identifying gaps in current control strategies, and developing strategy proposals.

8.3

Title: COMPREHENSIVE MONITORING AND EVALUATION FOR THE HIGHLAND SILVER LAKE WATERSHED

P.I. Tom Davenport and Robert Clarke, Illinois Environmental Protection Agency; and Ming T. Lee, Illinois State Water Survey

S.O.F. United States Department of Agriculture, Rural Clean Water Program

F.L.C. E

Dates: October 1981 through October 1986

Obj: The water quality monitoring strategy incorporates a multiple monitoring site approach to measure the duration, timing, and extent of nonpoint source pollutions. Major components of the monitoring strategy include the following: (1) tributary/sub-basin monitoring, (2) field/best management practices monitoring, (3) lake monitoring, (4) biological monitoring, (5) stream geometry and channel characteristics study, (6) lake sedimentation surveys, (7) watershed mapping and modeling.

First year data (FY 1982) will establish the preinstallation water quality characteristics of the lake and bay area, tributary streams, field areas, and sub-basins. The second year data will augment the baseline information and begin to monitor the effects of actual Best Management Practices implementation. Comprehensive physical monitoring efforts in the third year will provide a data base for evaluation of actual changes in water quality from a field basis and measure any changes of water quality in the lake and its tributary streams. Additional monitoring and analysis during the fourth and fifth years will make possible a more accurate assessment of the full effects of the program.  
(see 21.28)

8.4

Title: MONITORING AND EVALUATION OF THE EFFECTS OF APPLIED AGRICULTURAL BEST MANAGEMENT PRACTICES ON WATER QUALITY

P.I. Tom Davenport and Robert Clarke, Illinois Environmental Protection Agency; and Ming T. Lee, Illinois State Water Survey

S.O.F. United States Environmental Protection Agency, Clean Water Act

F.L.C. E

Dates: May 1979 through September 1983

Obj: The purpose of this project is to interpret preliminary trends in water quality data collected from project inception through October 1982 as part of the Blue Creek Watershed project. The primary purpose of this monitoring and evaluation project is to determine the actual yield of pollutants from a variety of agricultural practices to downstream receiving water and its effect upon the water quality and reasonable uses of the water resources.  
(see 21.27)

8.5

Title: DEVELOPMENT OF REGULATORY PROGRAM CRITERIA FOR FLOW VARIABLE POLLUTANTS

P.I. William Rice and Tom Davenport, Illinois Environmental Protection Agency; and Larry Toler, United States Geological Survey

S.O.F. United States Environmental Protection Agency, Clean Water Act

F.L.C. C

Dates: June 1981 through September 1983

Obj: This project will evaluate and recommend the overall approach to develop flow variable sediment and associated pollutant transport criteria for lakes and streams.

Work to be performed will include a detailed literature search and evaluation of the USGS-IEPA ambient water quality and flow monitoring data. A gravimetric data base will be developed and compared to the historical turbidity baseline. The criteria will be based upon low, medium, and high flow periods. Extensive use of the monitoring results from the Blue Creek monitoring and evaluation project and data base from the Nationwide Urban Runoff Program effort will supplement the efforts to allow comparison of before/after Best Management Practices implementation to achieve the water quality goals. The analyses will factor the relationships of flow, river stage/lake detention, groundwater impact and water quality associated with runoff waters, and stream/lake use characteristics. The output will include nonpoint source target criteria for key network stations to monitor progress and redirect implementation efforts to achieve the Clean Water Act goals and objectives.

8.6

Title: LAKE MICHIGAN FLOW DIVERSION STRATEGY BASED ON WATER QUALITY TRADEOFFS IN THE ILLINOIS RIVER

P.I. William Rice and Jim Pendowski, Illinois Environmental Protection Agency; and Krishan Singh, Illinois State Water Survey

S.O.F. United States Environmental Protection Agency

F.L.C. C

Dates: January 1981 through September 1982

Obj: This project used existing water quality models and developed a flow system to study flow diversion from Lake Michigan and water quality in the Illinois River. Parameters of particular concern in this study were ammonia and biological oxygen demand. The project output outlined an approach to a management strategy taking into account effluent from the Chicago area, Lake Michigan diversions and water release from dams to maintain reasonable water quality in the Illinois River. A 7-day, 10-year low flow map was to be updated (ISWS Bulletin 57, map 2). (see 21.37)

8.7

Title: NATIONWIDE URBAN RUNOFF PROGRAM (PHASE III)

P.I. William Rice and Wendy Coleman, Illinois Environmental Protection Agency; and Mike Bender, Illinois State Water Survey

S.O.F. United States Environmental Protection Agency, Clean Water Act

F.L.C. D

Dates: July 1981 through September 1983

Obj: This phase of the project will evaluate the effect of urban runoff on the quality of the receiving stream. A comprehensive data collection program will be used to establish the quantity and quality of dry weather and wet weather flow for a small agricultural basin upstream from and downstream from a significant urban contribution. The effect of municipal street sweeping upon the quality of urban runoff and the impact of that runoff on the receiving stream will be demonstrated by simulating the reduction in loading from the urban area as a result of various intensities of municipal sweeping. Existing conditions in the stream, upstream and downstream from the urban contribution will also be documented.  
(see 21.39)

9. ILLINOIS INSTITUTE OF TECHNOLOGY  
IIT Center, Chicago, Illinois 60616

9.1

Title: BIOAVAILABILITY OF QUATERNARY AMINES IN AQUATIC SYSTEMS  
P.I. H. E. Allen, Pritzker Department of Environmental Engineering,  
Illinois Institute of Technology  
S.O.F. Proctor & Gamble  
F.L.C. C  
Dates: July 1, 1981, through August 31, 1983  
Obj: Unavailable

9.2

Title: METAL SPECIATION AND SEPARATION  
P.I. C. N. Haas, Pritzker Department of Environmental Engineering,  
Illinois Institute of Technology  
S.O.F. Industrial Waste Elimination Research Center, United States  
Environmental Protection Agency  
F.L.C. D  
Dates: January 1, 1982, through December 31, 1982  
Obj: Unavailable

9.3

Title: MICROBIOLOGICAL ALTERATIONS IN WATER QUALITY IN DISTRIBUTION  
SYSTEMS AND GRANULAR ACTIVATED CARBON  
P.I. C. N. Haas, Pritzker Department of Environmental Engineering,  
Illinois Institute of Technology  
S.O.F. United States Environmental Protection Agency  
F.L.C. C  
Dates: January 1, 1980, through June 30, 1982  
Obj: Unavailable

9.4

Title: WASTEWATER TREATABILITY STUDY

P.I. C. N. Haas, Pritzker Department of Environmental Engineering,  
Illinois Institute of Technology

S.O.F. Modine Manufacturing Company

F.L.C. B

Dates: June 1, 1982, through August 31, 1982

Obj: Unavailable

9.5

Title: EVALUATION OF THE DYNAMICS OF MULTICOMPONENT SORPTION/DESORPTION  
PROCESSES WITH DIFFERENTIAL REACTOR COLUMNS

P.I. K. E. Noll, Pritzker Department of Environmental Engineering,  
Illinois Institute of Technology

S.O.F. Industrial Waste Elimination Research Center, United States  
Environmental Protection Agency

F.L.C. D

Dates: January 1, 1982, through December 31, 1982

Obj: Unavailable

9.6

Title: EXPERIMENTAL STUDIES ON ANAEROBIC TREATMENT

P.I. J. W. Patterson, Pritzker Department of Environmental Engineering,  
Illinois Institute of Technology

S.O.F. Smith, Kline & French

F.L.C. B

Dates: January 11, 1982, through September 11, 1982

Obj: Unavailable

10. LAKE MICHIGAN FEDERATION  
53 West Jackson Boulevard, Suite 1710, Chicago, Illinois 60604

10.1

Title: ALTERNATIVE WASTEWATER TREATMENT TECHNOLOGIES RESOURCE CENTER

P.I. Kathleen M. Brennan, Lake Michigan Federation

S.O.F. Private Foundation

F.L.C. C

Dates: October 1, 1981, through September 30, 1983

Obj: To develop a resource center on alternative technologies for the treatment of municipal wastewater. To summarize the information in the noncirculating library materials in two overview papers for distribution to communities in the Lake Michigan drainage area. To present three one-day workshops on the use, financing, and management of small-scale treatment alternatives to local officials and citizens' groups in the basin.

10.2

Title: WETLANDS MANAGEMENT PROGRAM

P.I. Gerald A. Paulson, Lake Michigan Federation

S.O.F. Private Foundation

F.L.C. C

Dates: January 1, 1982, through December 31, 1983

Obj: To develop a resource center on wetlands management for the Lake Michigan basin and to work with local communities to find cost-effective strategies to manage their wetland resources. Also, to compile and disseminate information on wetland values and the regulation of wetlands.

11. METROPOLITAN SANITARY DISTRICT OF GREATER CHICAGO  
100 East Erie Street, Chicago, Illinois 60611

11.1

Title: ECOSYSTEMATIC STUDY -- FISH SURVEY OF THE METROPOLITAN CHICAGO WATERWAY SYSTEM

P.I. S. G. Dennison and S. J. Sedita, Research and Development Department, Metropolitan Sanitary District of Greater Chicago

S.O.F. Metropolitan Sanitary District of Greater Chicago

F.L.C. C (yearly)

Dates: September 1974 through present

Obj: The objective of this survey is the determination of the distribution and abundance of fishes within the streams and deep draft waterways in the Chicago Metropolitan Area and the determination of the relationship of these parameters to the water quality of these waterways.

11.2

Title: MONITORING OF SOUTHWESTERN LAKE MICHIGAN WITH RESPECT TO ZION NUCLEAR POWER PLANT DISCHARGE

P.I. L. Kristoff, D. Lordi, C. Lue-Hing, Research and Development Department, Metropolitan Sanitary District of Greater Chicago

S.O.F. Metropolitan Sanitary District of Greater Chicago

F.L.C. Unavailable

Dates: October 1973 through present

Obj: To monitor the radiological water quality of southwestern Lake Michigan, under jurisdiction of the district, in order to ascertain if any changes occur as a result of discharges from Zion Nuclear Power Plant.

11.3

Title: ECOSYSTEMATIC STUDY -- BACTERIAL STUDY OF METROPOLITAN CHICAGO WATERWAYS

P.I. Parnell O'Brien and S. J. Sedita, Research and Development Department, Metropolitan Sanitary District of Greater Chicago

S.O.F. Metropolitan Sanitary District of Greater Chicago

F.L.C. B (yearly)

Dates: January 1974 through December 1983

Obj: To develop baseline data of bacterial indicator organism concentrations, *Salmonella* and *Pseudomonas aeruginosa*) in streams and deep-draft waterways under the jurisdiction of the Metropolitan Sanitary District of Greater Chicago.

11.4

Title: OPERATION LAKEWATCH

P.I. Parnell O'Brien and S. J. Sedita, Research and Development Department, Metropolitan Sanitary District of Greater Chicago

S.O.F. Metropolitan Sanitary District of Greater Chicago

F.L.C. C (yearly)

Dates: July 1980 through present

Obj: To develop baseline chemical and bacterial data on the southwestern shore of Lake Michigan and to monitor and correct various pollutant discharges to Lake Michigan emanating from the Chicago area.

11.5

Title: ENVIRONMENTAL PROTECTION SYSTEM AT FULTON COUNTY, ILLINOIS

P.I. J. R. Peterson and R. I. Pietz, Research and Development Department, Metropolitan Sanitary District of Greater Chicago

S.O.F. Metropolitan Sanitary District of Greater Chicago

F.L.C. D (yearly)

Dates: 1970 through present

Obj: To determine the impact of sewage sludge fertilization on the water resources of the Metropolitan Sanitary District of Greater Chicago Fulton County land reclamation site.

11.6

Title: SURFACE WATER RESOURCES SURVEY AT FULTON COUNTY, ILLINOIS

P.I. J. R. Peterson and R. I. Pietz, Research and Development Department, Metropolitan Sanitary District of Greater Chicago; and Larry Toler, United States Geological Survey

S.O.F. Metropolitan Sanitary District of Greater Chicago and United States Geological Survey

F.L.C. C (yearly)

Dates: 1972 through present

Obj: Hydrological data is collected on streams flowing through the Metropolitan Sanitary District of Greater Chicago's Fulton County land reclamation project. This study is to determine the impact of sewage sludge application on the area's water resources.

11.7

Title: IMPROVEMENTS IN DISSOLVED OXYGEN LEVELS BY ARTIFICIAL INSTREAM AERATION IN CHICAGO WATERWAYS

P.I. Irwin Polls and Booker Washington, Research and Development Department, Metropolitan Sanitary District of Greater Chicago

S.O.F. Metropolitan Sanitary District of Greater Chicago

F.L.C. D

Dates: October 1979 through July 1982

Obj: To evaluate the performance of the Devon Avenue Instream Aeration Station on the North Shore Channel as follows: (1) to determine the oxygen uptake, oxygen transfer rate, and oxygen transfer efficacy; (2) to determine the optimum operational mode of the blowers; (3) to determine the impact of instream aeration on downstream water quality.

11.8

Title: ECOSYSTEMATIC STUDY -- ALGAE SURVEY OF THE METROPOLITAN CHICAGO WATERWAY SYSTEM

P.I. W. Schmeelk and S. J. Sedita, Research and Development Department, Metropolitan Sanitary District of Greater Chicago

S.O.F. Metropolitan Sanitary District of Greater Chicago

F.L.C. C (yearly)

Dates: January 1974 through present

Obj: To develop baseline data of algal densities, compositions, and distributions in each of the waterways under the jurisdiction of the Metropolitan Sanitary District of Greater Chicago. By using these indigenous biota, to evaluate the water quality of each of the waterways.

11.9

Title: WATERWAYS NITRIFICATION

P.I. Booker Washington and Bernard Sawyer, Research and Development Department, Metropolitan Sanitary District of Greater Chicago

S.O.F. Metropolitan Sanitary District of Greater Chicago

F.L.C. C

Dates: September 1979 through December 1982

Obj: To determine the amount of instream nitrification that could occur in the man-made waterway system of the Metropolitan Sanitary District of Greater Chicago.

12. NATURAL HISTORY SURVEY DIVISION OF THE ILLINOIS DEPARTMENT OF ENERGY AND  
NATURAL RESOURCES  
Natural Resources Building, University of Illinois, Champaign 61820

12.1

Title: COOPERATIVE WATERFOWL RESEARCH

P.I. Frank C. Bellrose, Stephen P. Havera, and Glen C. Sanderson,  
Illinois Natural History Survey

S.O.F. Illinois Department of Conservation and United States Fish and  
Wildlife Service

F.L.C. D

Dates: May 1, 1980, through June 30, 1984

Obj: To determine the distribution of fall, winter, and spring waterfowl  
populations, to denote trends in abundance of waterfowl populations  
from 1939 to 1979, and to determine the chronology of waterfowl  
migration in Illinois. To determine the pristine and current  
distribution of waterfowl habitat and to document the current food  
habits of waterfowl in Illinois. To determine species composition,  
distribution, and hunter success of the Illinois waterfowl harvest  
at public shooting grounds and private duck clubs and to evaluate  
the effects of various hunting regulations on the harvest. To  
collate information and data generated from this project in a  
manuscript for publication as a book. Waterfowl produce wastes  
that affect water quality.

12.2

Title: THE EFFECTS OF HIGH TOTAL DISSOLVED SOLID LEVELS ON ILLINOIS  
MACROINVERTEBRATES

P.I. A. R. Brigham and J. D. Unzicker, Illinois State Natural History  
Survey

S.O.F. Illinois Department of Energy and Natural Resources

F.L.C. B

Dates: 1980 through 1981

Obj: To study effects of high total dissolved solid levels on macro-  
invertebrates.

12.3

Title: WATER QUALITY IN FRANK HOLTEN LAKE

P.I. A. R. Brigham, Illinois Natural History Survey

S.O.F. Illinois Department of Conservation

F.L.C. A

Dates: July 1, 1982, through June 30, 1985

Obj: To perform water quality analyses for lake restoration at Frank  
Holten Lake.

12.4

Title: EFFECTS OF USING HYBRID CARP TO CONTROL AQUATIC VEGETATION

P.I. Robert W. Gorden and Michael J. Wiley, Illinois Natural History Survey

S.O.F. Illinois Department of Conservation and United States Fish and Wildlife Service

F.L.C. E

Dates: April 1, 1980, through March 31, 1984

Obj: (1) To determine the effects of hybrid carp (*Ctenopharyngodon idella* female x *Hypothalmichthys nobilis* male) on the aquatic macrophytes, sportfish populations, lower trophic levels, and nutrient cycling and energy flow of aquatic ecosystems; (2) to compare those effects with herbicide (simazine and potassium endothall) applications on all ecosystem components; (3) to determine if the hybrid carp is sterile; (4) to develop a conceptual, predictive model that will provide analyses of management strategies.

12.5

Title: EFFECTS OF PROPOSED LAKE MICHIGAN DIVERSION ON WATERFOWL HABITAT IN THE ILLINOIS RIVER

P.I. Stephen P. Havera, Illinois Natural History Survey

S.O.F. United States Army Corps of Engineers, Chicago District, via Division of Water Resources, Illinois Department of Transportation

F.L.C. C

Dates: October 1, 1981, through December 31, 1982

Obj: To evaluate the mitigation required to replace losses of waterfowl habitat resulting from four proposed rates of diverted Lake Michigan water into the Illinois River. The four proposed diversion rates to be investigated are 7,000 cubic feet per second (cfs), 5,500 cfs, 4,800 cfs, and an arbitrary rate that would provide the most favorable cost/benefit ratio.

12.6

Title: PROPOSED EFFECTS OF LAKE MICHIGAN DIVERSION ON TERRESTRIAL HABITAT IN THE ILLINOIS RIVER VALLEY

P.I. Stephen P. Havera, Wildlife Research Station, Illinois Natural History Survey

S.O.F. United States Army Corps of Engineers, via Illinois Department of Transportation, Division of Water Resources

F.L.C. B

Dates: October 1, 1981, through September 30, 1982

Obj: This particular study will evaluate the impacts to the terrestrial habitat and corresponding impacts to waterfowl resulting from lower diversion plans than originally proposed by the Corps of Engineers. This study will also address possible mitigation measures that would be required to offset the losses of available habitat that may occur with an increased diversion of Lake Michigan water at Chicago as well as a schedule of diversion that may enhance waterfowl productivity.

12.7

Title: INVESTIGATIONS OF THE BIOLOGICAL COMMUNITIES OF THE KANKAKEE RIVER AND THE BRAIDWOOD COOLING POND

P.I. R. Weldon Larimore, Illinois Natural History Survey

S.O.F. Commonwealth Edison Company, Chicago, Illinois

F.L.C. E

Dates: July 1, 1981, through June 30, 1984

Obj: (1) To determine the preoperational effects of the Braidwood Power Plant on the river communities of the Kankakee River; (2) To determine the early colonization of the Braidwood Cooling Pond, a former strip-mine area. To study early colonization of phytoplankton, benthos, zooplankton, and fish, both qualitatively and quantitatively. Also to provide baseline data that would help indicate the future of any problems in water quality or lake management.

12.8

Title: SEASONAL AND DAILY MICROHABITAT SELECTION BY ILLINOIS STREAM FISHES

P.I. R. Weldon Larimore, Illinois Natural History Survey

S.O.F. Illinois Department of Transportation

F.L.C. C

Dates: March 1, 1980, through May 20, 1982

Obj: A study of the fishes in three streams was done to evaluate the combination of hydraulic conditions and habitat types most frequently utilized by various Illinois stream fishes during different life stages and times of the year.

12.9

Title: AN ELECTROFISHING SURVEY ON THE ILLINOIS RIVER - ANALYSIS OF HIGH WATER LEVELS ON FISH POPULATIONS

P.I. Kenneth Lubinski, Aquatic Biology Section, Illinois Natural History Survey

S.O.F. United States Army Corps of Engineers, and Illinois Department of Transportation, Division of Water Resources

F.L.C. A

Dates: September 1, 1981, through October 31, 1982

Obj: This particular study by the Natural History Survey is a continuation of an ongoing fisheries study. Because abnormally high water levels throughout 1981 resemble very closely what might happen if an increased diversion of Lake Michigan water at Chicago were allowed, the continuation of this study will offer a unique chance to investigate the effects of an increased diversion on the fishery of the Illinois River.

12.10

Title: ECOLOGICAL STUDIES OF NATIVE FISHES

P.I. L. M. Page, Illinois Natural History Survey, Department of Energy and Natural Resources

S.O.F. State of Illinois

F.L.C. C

Dates: Continuous

Obj: To determine ecological characteristics of native fishes. The data generated (mainly life history characteristics) are used in systematic and broader ecological studies, in assessing environmental impacts, and in protecting species and ecosystems.

12.11

Title: SEDIMENT TOXICITY STUDY

P.I. Richard E. Sparks, Aquatic Biology Section, Illinois Natural History Survey

S.O.F. United States Army Corps of Engineers, via Illinois Department of Transportation, Division of Water Resources

F.L.C. B

Dates: September 1, 1981, through July 31, 1983

Obj: This research will measure the toxicity of sediments in the upper Illinois River and analyze the impacts to the sediments and benthic community from an increased diversion of Lake Michigan water.

12.12

Title: TOXICITY OF SEDIMENTS IN THE ILLINOIS WATERWAY

P.I. Richard E. Sparks, Aquatic Biology Section, Illinois Natural History Survey

S.O.F. Illinois Department of Transportation, Division of Water Resources, and United States Army Corps of Engineers

F.L.C. B

Dates: September 1, 1981, through September 30, 1982

Obj: To measure the toxicity of sediments in the upper Illinois River, using a representative organism from the benthic community which once occurred in the upper River, the fingernail clam Musculium transversum.

12.13

**Title:** AN ELECTROFISHING SURVEY TO DETERMINE THE EFFECTS OF HIGH WATER IN 1981

**P.I.** Richard E. Sparks and Kenneth S. Lubinski, Aquatic Biology Section, Illinois Natural History Survey

**S.O.F.** United States Army Corps of Engineers, Chicago District

**F.L.C.** A

**Dates:** March 1982 through November 1982

**Obj:** An electrofishing survey of the Illinois River will be made in 1982 and the results compared to historical annual surveys to assess the relationship between water levels and fish populations. We anticipate that strong 1982 populations will be evident following high spring and summer flows and the availability of increased habitat in 1981 and 1982.

12.14

**Title:** IDENTIFICATION OF THE WATER QUALITY FACTORS WHICH PREVENT FINGERNAIL CLAMS FROM RECOLONIZING THE ILLINOIS RIVER - PHASE II

**P.I.** R. E. Sparks, Illinois Natural History Survey and A. A. Paparo, Southern Illinois University

**S.O.F.** United States Department of the Interior

**F.L.C.** C

**Dates:** February 1, 1980, through September 30, 1982

**Obj:** To follow up leads on the sensitivity of fingernail clams to pollutants by (1) measuring the effects of fluoride, cadmium, lead, and Illinois River sediment containing these materials on the survival, growth, and reproduction of intact fingernail clams; (2) determining the effects of fluoride, cadmium, and contaminated sediment on the ciliary beating rate of isolated clam gills; and (3) measuring the effects of fluoride, cadmium, lead, and contaminated sediment on the structure and composition of clam shells.

12.15

**Title:** LONG-TERM ECOLOGICAL RESEARCH ON THE ILLINOIS AND UPPER MISSISSIPPI RIVERS

**P.I.** R. E. Sparks and K. S. Lubinski, Illinois Natural History Survey; R. V. Anderson, Western Illinois University; N. G. Bhowmik, Illinois State Water Survey; and D. L. Gross, Illinois State Geological Survey

**S.O.F.** National Science Foundation

**F.L.C.** E

**Dates:** January 15, 1982, through December 30, 1986

**Obj:** To gather ecological data over a long period of time so that predictions of the effects of disturbances on the plants, animals, and vital processes occurring in river ecosystems can be tested and the understanding of river ecosystems and their responses to disturbances can be improved.

12.16

Title: WATER QUALITY INVESTIGATIONS AT LAKE SHELBYVILLE

P.I. Ted Storck, Illinois Natural History Survey

S.O.F. United States Army Corps of Engineers

F.L.C. C

Dates: October 1981 through September 1982

Obj: (1) To determine whether degradation exists in the Kaskaskia or Okaw rivers or Lake Shelbyville; (2) to provide warning of detrimental effects to water use; (3) to determine whether the reservoir causes quality problems or quality improvements; (4) to pinpoint degradation and determine changes necessary to improve operations or designs.

Collections are analyzed for chemical-physical parameters including BOD, CO<sub>2</sub>, COD, chlorides, DO, dissolved solids, hardness, nitrate, nitrite, ammonia, total nitrogen, pH, phosphate, sulfate, and turbidity. Also benthos, plant pigments, and fecal coliform levels are sampled during the year.

13. NORTHEASTERN ILLINOIS PLANNING COMMISSION  
400 West Madison Street, Chicago, Illinois 60606

13.1

Title: STREAM CLASSIFICATION - DUPAGE RIVER BASIN  
P.I. Phillip Peters, Northeastern Illinois Planning Commission  
S.O.F. Illinois Department of Energy and Natural Resources  
F.L.C. B  
Dates: May 1982 through August 1982  
Obj: To look at the water quality standards, goals, and inherent characteristics of the river to see if the standards should be adjusted for the competing goals and uses of the river.

13.2

Title: URBAN STORMWATER RUNOFF: DETENTION STORAGE AND SOURCE CONTROL DEMONSTRATION  
P.I. Gary C. Schaefer, Northeastern Illinois Planning Commission  
S.O.F. Illinois Department of Energy and Natural Resources  
F.L.C. C  
Dates: June 1982 through August 1982  
Obj: To examine two possible strategies for reducing the amounts of pollutants reaching streams in urban stormwater. The strategies are source control, which involves keeping pollutants out of stormwater, and detention storage, which allows pollutants to settle out of stormwater before it reaches a receiving station.

14. NORTHERN ILLINOIS UNIVERSITY  
DeKalb, Illinois 60115

14.1

Title: MINERALOGICAL SOURCES OF BARIUM IN CAMBRO-ORDOVICIAN AQUIFER ROCKS, NORTHERN ILLINOIS

P.I. I. Edgar Odom, Department of Geology, Northern Illinois University

S.O.F. United States Department of the Interior

F.L.C. B

Dates: December 1980 through December 1982

Obj: The goal of this project is to evaluate whether the abundance of Ba ion occurring in groundwater at certain locations in northern Illinois is related to a mineralogical source in the aquifers.

14.2

Title: SULFUR AND OXYGEN ISOTOPE STUDY OF SULFATE IN SURFACE WATER OF SELECTED STREAMS IN NORTHERN ILLINOIS

P.I. E.C. Perry, Jr., Department of Geology, Northern Illinois University

S.O.F. United States Department of the Interior

F.L.C. A

Dates: October 1980 through March 1983

Obj: This study is an attempt to use the oxygen and sulfur isotope composition of sulfate in northern Illinois groundwater to trace the origin of the sulfate. Data collection is complete. Local stream sulfate patterns and seasonal patterns are evident. The effect of point source discharges can be readily detected. This is a preliminary study involving many parameters.

14.3

Title: ISOTOPIC AND GEOLOGICAL STUDIES TO DETERMINE THE MECHANISMS RESPONSIBLE FOR HIGH CONCENTRATIONS OF 226-RADIUM IN SOME ILLINOIS GROUNDWATER SUPPLIES

P.I. E.C. Perry, Jr., Department of Geology, Northern Illinois University; R.H. Gilkeson and K. Cartwright, Illinois State Geological Survey

S.O.F. United States Department of the Interior

F.L.C. C

Dates: October 1981 through October 1983

Obj: This research, principally on the Cambrian-Ordovician Aquifer of northern Illinois, has further outlined the distinctiveness of isotopically light, homogeneous water of the region near Peoria compared to water in the northern part of the state. It has also elucidated some of the characteristics of water with high U-234/U-238 in the northern part of the state. Specifically high disequilibrium ratios are associated directly with producing horizons rather than with shale units.

15. NORTHWESTERN UNIVERSITY  
Evanston, Illinois 60201

15.1

Title: SIMULATION OF BLACKWATER TREATMENT IN COAL PREPARATION

P.I. Charles H. Dowding and Joseph A. FitzPatrick, Department of Civil Engineering, Northwestern University

S.O.F. United States Department of the Interior, Office of Domestic Mining Minerals, Fuel and Conservation

F.L.C. C

Dates: September 15, 1979, through June 30, 1982

Obj: To develop simulation models for blackwater cleaning processes, particularly static thickening and froth flotation. To compare design relations and simulation models to field data and extend model capability to preliminary preparation plant design and control systems.

15.2

Title: LEACHING OF TRACE METALS FROM LANDFILLED COAL-FIRED UTILITY WASTES

P.I. Joseph A. FitzPatrick, Department of Civil Engineering, Northwestern University

S.O.F. Industrial (Multiple Sources)

F.L.C. C

Dates: January 1, 1981, through December 30, 1982

Obj: Determine release of trace metals for scrubber sludge, fly ash mixtures under wide range of environmental solution conditions and leaching tests. Comparison of laboratory and simulated field results to chemical equilibrium computer models.

15.3

Title: SULFUR CHEMISTRY AND REMOVAL FROM GROUNDWATER SUPPLIES

P.I. Joseph A. FitzPatrick, Department of Civil Engineering, Northwestern University

S.O.F. City of Elgin, Department of Water

F.L.C. B

Dates: April 1, 1981, through June 30, 1982

Obj: Determine mechanisms, extent, and economics of removal of sulfide by precipitation and oxidation (including catalytic oxidation) from simulated and actual Elgin well waters. Chemicals evaluated include ferrous, ferric, ferrate, permanganate, and peroxide. Economic assessment.

16. PLANNING AND MANAGEMENT SERVICES, LTD.  
P.O. Box 927, 808 West Main Street, Carbondale, Illinois 62901

16.1

Title: FLOODPLAIN RESIDENTS NOTIFICATION PROJECT

P.I. Duane Baumann, Planning and Management Services, Ltd.

S.O.F. Federal Emergency Management Agency-State Assistance Program,  
Supplementary Projects

F.L.C. D

Dates: September 1981 through September 1982

Obj: To design, conduct, and evaluate a field experiment to advise and motivate floodplain residents to take steps to protect themselves from flood damages. The project will require knowledge in the fields of psychology, social sciences, flood hazard mitigation, interviewing, and statistical analysis.

17. RESOURCE ASSOCIATES, INC.  
53 West Jackson Boulevard, Suite 1632, Chicago, Illinois 60604

17.1

Title: CREATION OF WETLANDS HABITATS IN NORTHERN ILLINOIS

P.I. Donald Hey, Resource Associates, Inc.

S.O.F. Illinois Department of Energy and Natural Resources

F.L.C. C

Dates: December 1980 through December 1982

Obj: The project is Phase II of a study to determine the feasibility of establishing an artificial wetlands on a segment of the Des Plaines River. The wetlands project would provide a filtration mechanism for the river, improve water quality, increase flood storage capacity, and improve fish and wildlife diversity and habitat. Phase II work includes detailed design work and cost estimates for engineering, landscape development, and monitoring.

18. SOUTHERN ILLINOIS UNIVERSITY AT CARBONDALE  
Carbondale, Illinois 62901

18.1

Title: COAL FINES RECOVERY AND UTILIZATION

P.I. J. W. Chen, A. C. Kent, C. B. Muchmore, Department of Thermal and Environmental Engineering, Southern Illinois University at Carbondale

S.O.F. United States Department of the Interior

F.L.C. D

Dates: October 1979 through January 1, 1983

Obj: Develop and construct a pilot plant at 2 tons per day capacity to recover coal fines from slurry ponds and to make them into a quality product in an environmentally acceptable manner. The process includes washing, oil agglomeration, and pelletization. Water in the process is treated and reused. Simultaneously, a computer model is developed to evaluate energy balance and economics of the process, including land reclamation and use.

18.2

Title: RELATIVE EFFECTS ON RECEIVING STREAM BIOTA OF REDUCED AMMONIA LEVELS IN SEWAGE DISCHARGE DUE TO INITIATING ADVANCED TERTIARY TREATMENT

P.I. Roy Heidinger and William Lewis, Fisheries Laboratory, Southern Illinois University at Carbondale

S.O.F. Illinois Department of Energy and Natural Resources

F.L.C. B

Dates: November 1981 through August 1982

Obj: To isolate and evaluate the environmental impacts of ammonia and residual chlorine in streams receiving secondary sewage effluents; and to evaluate the ecological effects of advanced tertiary effluents throughout the annual biological cycle.

19. SOUTHERN ILLINOIS UNIVERSITY AT EDWARDSVILLE  
Edwardsville, Illinois 62026

19.1

Title: THE POST-MINING DEVELOPMENT OF SOUTHERN ILLINOIS STRIP-MINE LAKES

P.I. Richard B. Brugam, Department of Biological Sciences, Southern Illinois University

S.O.F. United States Department of the Interior

F.L.C. B

Dates: October 1980 through March 1983

Obj: The goal of this project is to determine if significant numbers of the acid lakes produced by surface-mining for coal neutralize with time. The approach has been to examine the sediment records of these lakes. Remains of fossils enclosed in the sediment and the chemical composition of the sediment provide information on rates of neutralization and recovery of mine lakes. The mechanisms of neutralization are also being examined.

20. STATE GEOLOGICAL SURVEY DIVISION OF THE ILLINOIS DEPARTMENT OF ENERGY AND NATURAL RESOURCES  
Natural Resources Building, University of Illinois, Champaign 61820

20.1

Title: GEOLOGIC STUDIES TO IDENTIFY THE SOURCE FOR HIGH LEVELS OF RADIUM AND BARIUM IN ILLINOIS GROUNDWATER SUPPLIES

P.I. Keros Cartwright and Robert H. Gilkeson, Illinois State Geological Survey

S.O.F. United States Department of the Interior

F.L.C. C

Dates: October 1977 through March 1983

Obj: This study is an investigation of the geochemical mechanisms responsible for the occurrence of high concentrations of barium, radium-226, and radium-228 in groundwater from the Cambrian and Ordovician bedrock in certain regions of northern Illinois. The study has defined those regions of Illinois where barium and radium may occur at high concentrations in the Cambrian and Ordovician bedrock.

20.2

Title: SUPPLEMENTAL GROUNDWATER SUPPLIES FOR EIGHT COMMUNITIES - PART II

P.I. Keros Cartwright and Robert W. Ringler, Illinois State Geological Survey

S.O.F. Illinois Department of Transportation

F.L.C. C

Dates: January 1982 - On Hold

Obj: Subsurface investigations to determine the hydrogeologic setting for numerous water-short communities, mainly in Central Illinois, by reexamination of existing subsurface data and geophysical surveys to identify, characterize, and map the extent of aquifers present within practical water transport distance of each community.

20.3

Title: UNDISTURBED CORE METHOD FOR DETERMINING AND EVALUATING THE HYDRAULIC CONDUCTIVITY OF UNSATURATED GLACIAL TILL IN ILLINOIS

P.I. Keros Cartwright, Illinois State Geological Survey; and Atef Elzeftawy, Water Resources Center, Desert Research Institute, University of Nevada

S.O.F. United States Department of the Interior

F.L.C. B

Dates: October 1978 through September 1982

Obj: This study refined the methodology of determination of the unsaturated and saturated hydraulic conductivity and soil-water diffusivity parameters of fine-grained sediments. These parameters are most useful in determining the potential environmental impact of municipal and industrial waste disposal sites and other nonpoint sources of pollution. They are also very useful in planning and managing efficient schemes of irrigation water.

20.4

Title: COLLECTION OF GEOLOGICAL AND GEOCHEMICAL DATA AND SAMPLES FROM  
SCHAUMBERG STATION WETLANDS

P.I. Jim Risatti, Illinois State Geological Survey

S.O.F. Illinois Department of Energy and Natural Resources

F.L.C. A

Dates: November through December 1981

Obj: The samples were collected at the wetlands before the site was altered by construction of the railway station and ancillary facilities. All field samples will be stored for two years. The information gained from the examination of the physical characteristics of the wetland will help determine civil engineering design factors (loading rates and detention time of runoff) when considering wetlands projects.

21. STATE WATER SURVEY DIVISION OF THE ILLINOIS DEPARTMENT OF ENERGY AND  
NATURAL RESOURCES  
Water Resources Building, University of Illinois, Champaign 61820

21.1

Title: SEDIMENT DIAGENESIS IN FRESHWATER SYSTEMS  
P.I. Michael J. Barcelona, Illinois State Water Survey  
S.O.F. State of Illinois and Various Other Agencies  
F.L.C. C  
Dates: July 1980 through August 1984  
Obj: The study of the role of organic compounds in the chemistry of sediment/water systems is the object of this program. Upon deposition of solid particles, a host of chemical and biologically mediated processes occur in the sediments that may result in the release of soluble trace metals and nutrients into overlying waters. Investigation of the identity and reactivity of soluble organic compounds, especially microbial metabolites, is the thrust of the preliminary stages of this program. Much of our initial activity has focussed on improved separation and analytical methods in sediments and sediment pore waters.

21.2

Title: GROUNDWATER SAMPLING FOR MONITORING PURPOSES  
P.I. Michael J. Barcelona and James P. Gibb, Illinois State Water Survey  
S.O.F. United States Environmental Protection Agency  
F.L.C. D  
Dates: June 1, 1982, through May 31, 1984  
Obj: To determine the effects of well construction materials, pumps, and sampling strategies on the integrity of water samples drawn from monitoring wells. To publish a state-of-the-art manual on the subject.

21.3

Title: USEFULNESS OF SEDIMENT OXYGEN DEMAND AS A TOOL FOR IMPOUNDMENT  
MANAGEMENT  
P.I. Michael Barcelona and Woodrow Wang, Illinois State Water Survey  
S.O.F. United States Department of the Interior  
F.L.C. B  
Dates: October 1980 through August 1982  
Obj: The goals of the project were to identify the principal chemical species that contribute to oxygen demand of freshwater sediments and to develop an optimized sediment oxygen demand technique that would lend itself to practical application in lake management efforts.

21.4

Title: A CONCEPTUAL MODEL OF EROSION AND SEDIMENTATION PROCESSES IN ILLINOIS

P.I. Nani Bhowmik, Illinois State Water Survey

S.O.F. Illinois Department of Energy and Natural Resources

F.L.C. C

Dates: September 1, 1982, through August 30, 1983

Obj: The purpose of this research project is to address Illinois's erosion/sediment issue, paying particular attention to impacts of sediment on stream biota and environment, water treatment plants, lake sedimentation; location and causes of sheet, gully, and stream bank erosion; effect of reduced field erosion on in-stream erosion; pollutants carried by sediments; and quantity and magnitude of sediment carried by Illinois streams. Despite all of the water resources inventories and data in Illinois, sediment loss from Illinois watersheds and its movement with water is one of the least understood processes within the state.

21.5

Title: HYDRAULICS OF FLOW AND SEDIMENT TRANSPORT IN THE KANKAKEE RIVER

P.I. Nani Bhowmik, Illinois State Water Survey

S.O.F. Illinois Department of Energy and Natural Resources

F.L.C. C

Dates: September 1978 through August 1983

Obj: The State Water Survey is collecting and analyzing data on the hydraulic and sediment transport aspects of the Kankakee River. The study was initiated to determine effects on the Illinois portion of the river due to man-induced management practices conducted in the State of Indiana (characterization, dredging, levee maintenance, snagging and cleaning operations). Data collection is aiding in determination of best management practices for maintenance of the river.

21.6

Title: LAKE SEDIMENTATION INVESTIGATIONS

P.I. Nani Bhowmik, Illinois State Water Survey

S.O.F. State Agencies or Municipalities

F.L.C. A

Dates: Variable for each project

Obj: To determine the rate of sedimentation, and the remaining storage volume available and to estimate the useful life of lakes in Illinois. Most of the lakes are used for public water supplies and the scheduling of remedial work or new sources of supply depend on accurate information on the existing lake. These projects are usually cooperative efforts between the Water Survey and the city or village that owns the lake.

21.7

Title: SEDIMENT MONITORING IN ILLINOIS

P.I. Nani Bhowmik, Illinois State Water Survey

S.O.F. Illinois Department of Energy and Natural Resources

F.L.C. C

Dates: September 1981 through August 1983

Obj: The project initially established a 50-station, sediment-monitoring network for measuring sediment transport through major streams and rivers throughout the state. The objective of the monitoring network was to determine rates of sediment transport and deposition due to soil erosion and their effect on water quality. Funding reductions will result in a reduction in the number of monitoring stations; however, data collection will still be conducted for approximately two-thirds of the state.

21.8

Title: DEVELOP AND TEST TECHNIQUES TO EVALUATE WEATHER MODIFICATION

P.I. Stanley A. Changnon and Chin-Fei Hsu, Illinois State Water Survey

S.O.F. National Science Foundation

F.L.C. D

Dates: July 1, 1981, through June 30, 1983

Obj: To devise innovative approaches and to study and assess statistical techniques for use in the weather modification operations. A few past operational projects in Kansas, Oklahoma, and Illinois were carefully selected for evaluation to test the statistical techniques.

21.9

Title: THE IMPACT OF WASTE FROM A WATER TREATMENT PLANT ON RECEIVING STREAM

P.I. Ralph Evans, Illinois State Water Survey

S.O.F. Illinois American Water Company

F.L.C. B

Dates: November 1, 1981, through March 31, 1983

Obj: To determine quantities, characteristics, and release patterns of waste generated within a water treatment plant and the impact of this waste on the waters and bottom sediments of receiving streams.

21.10

Title: IDENTIFICATION AND RELATIVE INFLUENCE OF NONPOINT SOURCES ON THE WATER QUALITY OF COURT CREEK

P.I. Ralph Evans, Illinois State Water Survey

S.O.F. Illinois Department of Energy and Natural Resources

F.L.C. C

Dates: December 1981 through August 1982

Obj: To develop an overall water quality management program, including specific demonstration projects, that will enhance the water quality of the streams in the 100 square mile Court Creek Watershed.

21.11

Title: PREDICTING THE INFLUENCE OF LAKE MICHIGAN DIVERSION ON THE WATER QUALITY AND CHARACTERIZING THE BOTTOM SEDIMENT OF THE ILLINOIS WATERWAY

P.I. Ralph Evans, Illinois State Water Survey

S.O.F. United States Army Corps of Engineers, and Illinois Department of Transportation, Division of Water Resources

F.L.C. C

Dates: January 1, 1982, through September 30, 1982

Obj: This particular study by the Illinois State Water Survey will examine the water quality impacts to the Illinois waterway from the Peoria pool to the Lockport powerhouse as a result of a lower diversion plan/s than earlier studied by the Corps of Engineers. In addition, the characteristics of the bottom sediments will be evaluated to determine if there are other limiting factors to improving water quality in the waterway. Water parameters to be analyzed include DO, ammonia nitrogen, nitrate and nitrite nitrogen, BOD; soil sediment parameters include particle size, moisture, volatiles, and benthic inhabitants.

21.12

Title: DETERMINATION OF THE IMPACT OF COMBINED SEWER OVERFLOWS AT PEORIA ON WATER QUALITY OF ILLINOIS WATERWAY

P.I. Ralph Evans and Thomas Butts, Illinois State Water Survey

S.O.F. City of Peoria

F.L.C. C

Dates: February 10, 1982, through July 10, 1983

Obj: To determine the effects of combined sewer overflows relative to near-shore bottom sediments and biota; to DO, NH<sub>3</sub>, heavy metals and bacteria concentration in the water column; to areal extent of water quality changes, if any; and to a water quality model for prediction purposes.

21.13

Title: PREDICTING THE INFLUENCE OF VARYING REGIMES OF LAKE MICHIGAN DIVERSION ON WATER QUALITY OF ILLINOIS WATERWAY

P.I. Ralph Evans and Thomas Butts, Illinois State Water Survey

S.O.F. Division of Water Resources, Illinois Department of Transportation, and the United States Army Corps of Engineers

F.L.C. C

Dates: January 1, 1982, through March 30, 1983

Obj: To determine the minimum quantities of Lake Michigan diversion flows required to significantly improve the chemical and biological quality of the Illinois Waterway.

21.14

Title: ROTATING BIOLOGICAL CONTACTORS PROCESS AT PRINCETON WASTEWATER TREATMENT PLANT

P.I. Ralph Evans and Shundar Lin, Illinois State Water Survey

S.O.F. State of Illinois

F.L.C. C

Dates: January 1981 through September 1982

Obj: To evaluate the rotating biological contactors (RBC) process for secondary treatment (BOD<sub>5</sub> removal) and nitrification. The performance of each stage of RBC system is being investigated to provide information for RBC design criteria. Nineteen water quality parameters are being examined.

21.15

Title: INTERCOMPARISON FIELD STUDY OF DRY DEPOSITION MONITORS AND MEASUREMENT METHODS

P.I. Donald F. Gatz, Illinois State Water Survey

S.O.F. United States Environmental Protection Agency

F.L.C. D

Dates: April 1, 1981, through March 31, 1983

Obj: To host a one-month field intercomparison of dry deposition measurement methods and prepare a report comparing their results. These studies are providing methodologies for further studies on the relationship of dry deposition to water pollution.

21.16

Title: MEASUREMENT OF CRUSTAL AEROSOL COMPOSITION

P.I. Donald F. Gatz, and Gary J. Stensland, Illinois State Water Survey

S.O.F. National Science Foundation, Atmospheric Chemistry

F.L.C. D

Dates: March 1, 1981, through February 28, 1983

Obj: To develop and apply methods of generating soil aerosols for measurement of elemental composition; methods include the use of a wind tunnel, laboratory airjet devices, bulk sampling, and dry sieving with conventional sieves and ultrasonic techniques. These studies are providing methodologies for further studies on acid precipitation.

21.17

Title: SURVEY OF THE BENTHIC MACROINVERTEBRATES FOUND IN THE ALTON POOL OF THE ILLINOIS RIVER

P.I. Thomas Hill, Illinois State Water Survey

S.O.F. State of Illinois

F.L.C. A

Dates: June 1, 1981, and continuing

Obj: An attempt will be made to characterize the kinds and densities of the benthic macroinvertebrates found in the Alton Pool and relate their distribution to such factors as substrate type, particle size, mile point, depth, location on transect, and proximity to navigation.

21.18

Title: ILLINOIS WATER INVENTORY PROGRAM

P.I. James Kirk, Illinois State Water Survey

S.O.F. Illinois Department of Energy and Natural Resources

F.L.C. B

Dates: 1978 and continuing

Obj: The Illinois Water Inventory Program has been collecting water withdrawal data for use in the planning and management of water resources since 1978. The goal of the program is to document and disseminate water withdrawal information useful to the state. Current public interest in agricultural irrigation also suggests a need to improve the collection of data about irrigation in Illinois. A published brochure will address the competition for water issue and illustrate the latest water use patterns, including agricultural irrigation.  
(see 21.32 and 22.9)

21.19

Title: AERATION-DESTRATIFICATION OF LAKE EUREKA USING A LOW ENERGY DESTRATIFIER

P.I. V. Kothandaraman, Illinois State Water Survey

S.O.F. City of Eureka and the State of Illinois

F.L.C. B

Dates: September 1, 1981, and continuing

Obj: Lake Eureka served as a water supply source to the city until 1979 when it switched to ground water as a source. The change was necessitated because of severe taste and odor problems in the finished waters. A lake management technique developed by the Water Survey involving total destratification of the lake in combination with periodic in-lake chemical treatments showed remarkable improvements in lake water quality characteristics. The city reverted to the lake as a water supply source on April 13, 1982. The annual savings in power and chemical costs are estimated to be between \$35,000 and \$40,000.

21.20

Title: CONTINUED AERATION/DESTRATIFICATION IN LAKE CATHERINE, FOX CHAIN OF LAKES

P.I. V. Kothandaraman, Illinois State Water Survey

S.O.F. Illinois Department of Transportation, Division of Water Resources

F.L.C. B

Dates: May 1, 1981, through December 31, 1982

Obj: An aerator device was installed in Lake Catherine in 1978 and has been in use since then. The aerator is operated continuously during the period - mid May to mid October each year. Oxygen resources of the lake and the water clarity in the lake have significantly improved. Fishing in the lake was reported to have improved. Two to four algicide applications were made to the lake during the past years and none is anticipated in 1982.

21.21

Title: DIAGNOSTIC-FEASIBILITY STUDY OF JOHNSON SAUK TRAIL LAKE (PHASES I & II)

P.I. V. Kothandaraman, Illinois State Water Survey

S.O.F. Department of Conservation, United States Environmental Protection Agency

F.L.C. C

Dates: January 1, 1981, through January 14, 1982

Obj: The objectives are to delineate the current lake conditions, and causes of degradation and to identify and quantify the sources of nutrients and other pollutants reaching the lake. Based on this information, various lake management alternatives will be evaluated. An economically and technically feasible lake management plan will be developed to restore and protect the lake water quality for improved fishing and other recreational opportunities.

21.22

Title: DIAGNOSTIC-FEASIBILITY STUDY OF LAKE LE-AQUA-NA (PHASES I AND II)

P.I. V. Kothandaraman, Illinois State Water Survey

S.O.F. United States Environmental Protection Agency and Illinois Department of Conservation

F.L.C. C

Dates: January 1, 1981, through January 14, 1983

Obj: The objectives are to delineate the current lake conditions and causes of degradation and to identify and quantify the sources of nutrients and other pollutants reaching the lake. Based on this information, various lake management alternatives will be evaluated. An economically and technically feasible lake management plan will be developed to restore and protect the lake water quality for improved fishing and other recreational opportunities.

21.23

Title: DIAGNOSTIC STUDIES OF GROWING SEASON RAINFALL FLUCTUATIONS IN CENTRAL NORTH AMERICA

P.I. Peter J. Lamb, Illinois State Water Survey

S.O.F. National Science Foundation, Climate Dynamics Program

F.L.C. D

Dates: September 1, 1981, through February 28, 1984

Obj: The fundamental goal is to quantify the climate system processes contributing to the late spring-summer rainfall of central North America for several years when this rainfall exhibited contrasting temporal and spatial patterns. Rawinsonde soundings will be used to evaluate each growing season's temporal and spatial variations in tropospheric divergence, static stability, and vertical motion, and in the amount, transport, and divergence of atmospheric water vapor. Since much of the late spring-summer water vapor over central North America emanates from the Gulf of Mexico, Caribbean Sea, and Western subtropical North Atlantic, we are also investigating the variability of the evaporation from these waters and the factors controlling it.

21.24

Title: WORKSHOP TO ASSESS THE PRESENT AND POTENTIAL USE OF CLIMATE INFORMATION BY THE PRIVATE AGRICULTURAL SECTOR

P.I. Peter J. Lamb, Illinois State Water Survey

S.O.F. National Science Foundation, Climate Dynamics Research Program

F.L.C. B

Dates: March 15, 1982, through September 14, 1983

Obj: To use a questionnaire survey and a workshop to establish the present use of climate information by this sector, the maximum possible such use for the future, the impediments to achieving this potential, and the research needed to assist the potential being realized and hence the minimization of the adverse socioeconomic consequences of climatic variability.

21.25

Title: FLOODPLAIN INFORMATION DEPOSITORY, ENGINEERING AND DISCHARGE REVIEW

P.I. John Lardner, Illinois State Water Survey

S.O.F. Illinois Department of Energy and Natural Resources

F.L.C. B

Dates: September 1981 through August 1983

Obj: The objective of this project is to provide maintenance of the state floodplain information repository. The repository provides technical data relevant to the information needs of state and federal programs, including the National Flood Insurance program. Information on floodplain studies, review of 100-year flood discharges, and other services are provided. An update of the computerized data research and retrieval system and revision of an informational brochure will be included.

21.26

Title: A DRAINAGE STUDY AT HENNEPIN CANAL NEAR PRINCETON

P.I. Ming T. Lee, Illinois State Water Survey

S.O.F. Illinois Department of Conservation

F.L.C. B

Dates: July 1, 1982, through September 15, 1982

Obj: Three main objectives are as follows: (1) to gather available data and field information regarding a small watershed in Bureau County and the culverts connecting to Bureau Creek; (2) to analyze all the data relating to gross erosion, sediment deposition, flood stage and rainfall-runoff process in the area; (3) to propose solutions to eliminate the drainage problems in the area.

21.27

Title: EROSION AND SEDIMENTATION ASSESSMENT IN THE BLUE CREEK WATERSHED, PIKE COUNTY, ILLINOIS

P.I. Ming T. Lee, Illinois State Water Survey

S.O.F. Illinois Environmental Protection Agency

F.L.C. C

Dates: September 1979 through February 1983

Obj: The primary objectives are: (1) to monitor and evaluate the most viable agricultural nonpoint source pollution control strategy; (2) to monitor and evaluate the strategic points within the watershed for documenting the movement of pollutants based on a continuous time frame and storm events.  
(see 8.4)

21.28

Title: MONITORING AND EVALUATING THE RURAL CLEAN WATER PROGRAM IN HIGHLAND SILVER LAKE WATERSHED

P.I. Ming T. Lee, Illinois State Water Survey

S.O.F. Agricultural Stabilization and Conservation Service, United States Department of Agriculture

F.L.C. C

Dates: June 1, 1981, through December 31, 1986

Obj: The objectives of this project are: (1) to identify the nature and magnitude of nonpoint source pollution in surface runoff from agricultural watershed; (2) to determine and evaluate which Best Management Practices are most effective in reducing agricultural nonpoint source pollution.  
(see 8.3)

21.29

Title: FIELD DETERMINATION OF VERTICALLY AVERAGED LONGITUDINAL DISPERSIVITY

P.I. Thomas G. Naymik, Illinois State Water Survey

S.O.F. Oklahoma State University

F.L.C. B

Dates: February 1, 1982, through August 31, 1982

Obj: To determine the longitudinal dispersivity of dissolved constituents in groundwater in a field situation over as long a time period and travel distance as feasible. To satisfy the assumption of vertical averaging inherent in planar mass transport models and thereby provide input values of dispersivities for these models.

21.30

Title: CORROSION PRODUCT - CORROSION RATE - WATER QUALITY INVESTIGATION IN BUILDING SYSTEMS

P.I. C. H. Neff, Illinois State Water Survey

S.O.F. United States Environmental Protection Agency

F.L.C. D

Dates: April 13, 1981, through April 12, 1982

Obj: The primary objective of the investigation is to determine the corrosion rates of copper and galvanized steel in seven water supplies of varying quality in Illinois. After determining the water chemistry and corrosion products from nineteen test sites over a two-year period, the data will be correlated to assist the USEPA in setting limits on corrosivity and corrective treatment for water supplies.

21.31

Title: GROUNDWATER AND ITS RELATIONSHIP TO SURFACE WATER IN THE SANGAMON RIVER BASIN (PART I)

P.I. Michael O'Hearn, Illinois State Water Survey

S.O.F. Illinois Environmental Protection Agency

F.L.C. C

Dates: September 1, 1982, through June 30, 1983

Obj: To provide pertinent information regarding the groundwater resources of the Sangamon River basin to be used in the development of a comprehensive plan for the long-term management of the water resources of the basin. To gather, compile, summarize, analyze, and interpret collected data in such a way as to make this information more useful in the planning and management process.

21.32

Title: STATEWIDE WATER USE INVENTORY

P.I. Ellis W. Sanderson and James R. Kirk, Illinois State Water Survey

S.O.F. United States Geological Survey, Water Resources Division

F.L.C. C

Dates: October 1, 1981, through September 30, 1982

Obj: To furnish 1980 aggregated withdrawal data to the National Water Use Data System. To update master mailing lists for public water supply systems and self-supplied industries for 1981 withdrawals. To canvass public water supplies and self-supplied industries, acquiring and storing water withdrawal data by township, hydrologic unit, and aquifer system. To develop a mailing list of irrigation well owners. To answer requests for water use data.  
(see 21.18 and 22.9)

21.33

Title: GROUNDWATER LEVEL ANALYSIS BY COMPUTER MODELING, AMERICAN BOTTOMS GROUNDWATER STUDY

P.I. Richard J. Schicht, Illinois State Water Survey

S.O.F. United States Army Corps of Engineers, St. Louis District

F.L.C. C

Dates: August 13, 1981, through November 5, 1982

Obj: To prepare a history of groundwater levels in the American Bottoms. To develop and calibrate a groundwater-level computer model. To determine existing and to predict future groundwater-level exceedance probability without any proposed improvements, and to evaluate various alternatives to reduce groundwater levels. To prepare a user's manual for the computer model and provide training in its use.

21.34

Title: STUDY OF ATMOSPHERIC POLLUTANT SCAVENGING

P.I. Richard G. Semonin, Assistant Chief, Illinois State Water Survey

S.O.F. United States Department of Energy

F.L.C. D

Dates: Continuous

Obj: To measure and characterize the precipitation chemistry of North America, especially the eastern United States, to estimate the temporal and spatial variability of wet deposited pollutants, to estimate the sources (natural and man-made), and to assess the effects of source strength variations on wet deposition.

21.35

Title: EFFECTS OF DISCRETIONARY DIVERSION MANAGEMENT ON DISSOLVED OXYGEN RESOURCES OF ILLINOIS RIVER\*

P.I. Krishan Singh and Thomas Butts, Illinois State Water Survey

S.O.F. Illinois Environmental Protection Agency

F.L.C. B

Dates: November 1, 1981, through November 1, 1982

Obj: To develop an optimal diversion scheme whereby Lake Michigan waters may be introduced into the waters of the Illinois Waterway that will have the maximum beneficial impact on the downstream dissolved oxygen resources of the waterway.

\*A part of the project not related to 7-day, 10-year flow and flow system model portion of project.

21.36

Title: FEASIBILITY STUDY FOR THE LAKE OF THE WOODS

P.I. Krishan Singh and Ming T. Lee, Illinois State Water Survey

S.O.F. Illinois Environmental Protection Agency

F.L.C. B

Dates: August 1, 1981, through October 31, 1982

Obj: To identify and discuss the alternatives for pollution control and lake restoration; to identify and justify the most economical and practical alternatives for the Lake of the Woods; and to explore the costs and benefits associated with implementation of the desired alternatives.

21.37

Title: SEVEN-DAY, TEN-YEAR LOW FLOWS, FLOW SYSTEM MODEL, AND EFFECTS OF DISCRETIONARY DIVERSION MANAGEMENT ON THE DISSOLVED OXYGEN RESOURCES OF THE ILLINOIS RIVER

P.I. Krishan Singh and Ralph L. Evans, Illinois State Water Survey

S.O.F. Illinois Environmental Protection Agency

F.L.C. C

Dates: November 1, 1981, through September 30, 1982

Obj: To develop a 7-day, 10-year low flow map for the 1980 condition of effluents for the Des Plaines, DuPage, Fox, and Chicago waterways; to develop an Illinois River flow system model for simulation and increased diversion analyses; and to determine desirable discretionary diversion management and its effect on the dissolved oxygen resources of the Illinois River.  
(see 8.6)

21.38

Title: CENTRAL ANALYTICAL LABORATORY FOR NATIONAL ATMOSPHERIC DEPOSITION PROGRAM

P.I. Gary J. Stensland and Richard G. Semonin, Illinois State Water Survey

S.O.F. Individual monitoring sites via many different state, federal, and private agencies

F.L.C. D

Dates: July 1, 1978, through June 30, 1983 (renewed annually)

Obj: To analyze samples for the National Atmospheric Deposition Program (NADP). The objectives of NADP are to operate a national atmospheric deposition network to determine spatial and temporal trends and to coordinate research on effects of this deposition.

21.39

Title: CHAMPAIGN, ILLINOIS NATIONWIDE URBAN RUNOFF PROGRAM

P.I. Michael L. Terstriep, Surface Water Section, Illinois State Water Survey

S.O.F. Illinois Environmental Protection Agency

F.L.C. C

Dates: July 1, 1982, through March 31, 1983

Obj: Original: determination of effectiveness of municipal street sweeping as urban runoff quality control measure. Current: assessment of impact of urban storm runoff on receiving stream.  
(see 8.7)

21.40

Title: INTERACTIVE BASINWIDE WATER ASSESSMENT MODEL

P.I. Michael L. Terstriep and Krishan P. Singh, Illinois State Water Survey

S.O.F. Illinois Department of Transportation

F.L.C. C

Dates: January, 1982 - on hold

Obj: A methodology has been developed that will combine complex analysis of streamflow records with simple translation algorithms to provide an assessment of water availability at any stream location in the watershed. Each stream gage record will be adjusted for artificial withdrawals and returns within the watershed. The adjusted record will be analyzed to produce the product needed by users.

21.41

Title: UPDATE OF BULLETIN 51 AND SIDE-CHANNEL RESERVOIR STORAGE DESIGN

P.I. Michael L. Terstriep and Vernon Knapp, Illinois State Water Survey

S.O.F. Illinois Department of Transportation

F.L.C. C

Dates: June 30, 1978, through April 30, 1982

Obj: The goal of the study was to update Bulletin 51 with additional streamflow data for the period 1963 through 1978. The bulletin contains processed data for 164 gaging stations in Illinois, which allow a yield to be calculated for a reservoir anywhere in the state. Hydrologic design of side-channel reservoirs provides the appropriate analysis of data and formulation of side-channel storage design techniques.

21.42

Title: HYDROGEOLOGIC ASSESSMENT OF THE NORTHERN MIDWEST REGIONAL AQUIFER SYSTEM IN ILLINOIS

P.I. Adrian P. Visocky, Illinois State Water Survey

S.O.F. United States Geological Survey, Water Resources Division

F.L.C. B

Dates: April 1, 1979, through March 31, 1982

Obj: To work with USGS personnel to interpret aquifer and formation test data and water quality data. To work with the staffs of the USGS Water Resources Division and the Illinois State Geological Survey and to assume the lead role in developing a joint report of the Cambrian-Ordovician and basal Cambrian aquifer units in Illinois.

21.43

Title: IMPACT OF LAKE MICHIGAN ALLOCATIONS ON THE CAMBRIAN-ORDOVICIAN AQUIFER SYSTEM

P.I. Adrian Visocky, Illinois State Water Survey

S.O.F. Illinois Department of Transportation, Division of Water Resources

F.L.C. B

Dates: Just completed, July 1982

Obj: Overpumping of the Cambrian-Ordovician aquifer in the Chicago area has caused severe water level declines in portions of Cook, DuPage, Kane, and Will Counties. Recent changes in the accounting procedure involved in diversion of Lake Michigan water have released more water for public supplies. As communities currently withdrawing water from deep wells receive allocations of Lake Michigan water, deep pumpage will decrease in those areas and water levels will partially recover. Major cones of depression will shift southward to Joliet and westward to the Fox River communities north of Aurora. Critically low water levels caused by pumpage in these areas will result in a loss of as much as 19% of pumping capacity by the year 2020. Despite lake allocations, deep pumpage will grow again and will still exceed the practical sustained yield (65 mgd) of the aquifer. Continued growth in Wisconsin pumpage will also contribute an estimated additional decline of about 80 feet near the state line between 1980 and 2020.

21.44

Title: AQUATIC BIOASSAY BY USING COMMON DUCKWEED

P.I. W. C. Wang, Illinois State Water Survey

S.O.F. State of Illinois

F.L.C. B

Dates: January 1, 1982, and continuing

Obj: The objective is to develop a methodology for aquatic toxicological study by using common duckweed. Heavy metals Cd, Cu, Ni, and Zn are tested for their effect on duckweed. Special emphasis is to determine the precision and sensitivity of the duckweed bioassay method.

21.45

Title: NITROBACTER AS AN INDICATOR OF TOXICITY IN WASTEWATER

P.I. W. C. Wang, Illinois State Water Survey

S.O.F. Illinois Department of Energy and Natural Resources

F.L.C. C

Dates: February 1982 through August 1983

Obj: The objective is to assess the effectiveness and simplicity of using Nitrobacter as a method which can indicate toxins in wastewater. The first phase of research consisted of growing the Nitrobacter and testing it with model toxins. The second phase includes verification of the work in phase one and actually testing with "real" samples from treatment plants, streams, and lakes.

21.46

Title: POTENTIAL NITRATE CONTAMINATION OF GROUNDWATER IN THE ROSCOE AREA,  
WINNEBAGO COUNTY, ILLINOIS

P.I. H. Allen Wehrmann, Illinois State Water Survey, and Illinois  
Department of Energy and Natural Resources

S.O.F. Winnebago County Board, Rockford, Illinois, and Illinois Department  
of Energy and Natural Resources

F.L.C. C

Dates: February 1, 1982, through January 31, 1983

Obj: To carry out a study to provide a better understanding of the  
regional groundwater system in Winnebago County and how this system  
interacts with man-made influence to affect groundwater quality.  
To assess current and projected effects on groundwater due to  
continued development of the area so that intelligent decisions and  
planning can be implemented in the future development of the Roscoe  
area.

22.4

Title: AN EVALUATION OF BEDLOAD DATA IN ILLINOIS  
P.I. Julia B. Graf, United States Geological Survey  
S.O.F. United States Geological Survey  
F.L.C. B  
Dates: October 1, 1982, through September 30, 1982  
Obj: To evaluate bedload data from 13 stations with the Helley-Smith sampler; to examine possibility of supplementing bedload records by indirect methods and to compare these methods with data collected outside Illinois; and to evaluate the suitability of each bedload sampling station.

22.5

Title: DISPERSION CHARACTERISTICS OF ILLINOIS STREAMS  
P.I. Julia B. Graf and George Garklavs, United States Geological Survey  
S.O.F. Cooperative  
F.L.C. C  
Dates: January 1, 1975, through September 30, 1982  
Obj: To obtain a statewide data base of travel times and dispersion characteristics in Illinois streams and to develop a relationship between these data and basin or streamflow characteristics.

22.6

Title: EROSION AND LANDFORM MODIFICATION AT SHEFFIELD, ILLINOIS, LOW-LEVEL RADIOACTIVE WASTE DISPOSAL SITE  
P.I. John R. Gray, United States Geological Survey  
S.O.F. United States Geological Survey  
F.L.C. D  
Dates: October 1, 1980, through September 30, 1984  
Obj: To determine geomorphic changes due to erosion and sedimentation; to determine potential for erosion and slumping and to identify problem areas; and to develop a comparative data base.

22.7

Title: HYDROLOGY OF UNSATURATED FLOW THROUGH POROUS MEDIA AT THE LOW-LEVEL RADIOACTIVE WASTE DISPOSAL SITE NEAR SHEFFIELD, ILLINOIS

P.I. Richard W. Healy, United States Geological Survey

S.O.F. United States Geological Survey

F.L.C. E

Dates: October 1, 1980, through September 30, 1984

Obj: To quantify and qualify the mechanisms that control the movement of water and transport of radionuclides from disposal trenches through the unsaturated zone to the water table.

22.8

Title: PRECIPITATION-RUNOFF MODELING OF COAL STRIP-MINING AREAS OF ILLINOIS

P.I. Alan R. Klinger, United States Geological Survey

S.O.F. United States Geological Survey

F.L.C. D

Dates: October 1, 1981, through September 30, 1983

Obj: To document the effects of strip mining and subsequent reclamation on the hydrology of small basins and to evaluate a model that can simulate these effects.

22.9

Title: ILLINOIS WATER USE DATA PROGRAM

P.I. T. R. Lazaro, United States Geological Survey

S.O.F. United States Geological Survey

F.L.C. C

Dates: 1978 through present

Obj: To collect, store, and publish a water-use inventory for the State of Illinois. To categorize by county and hydrologic unit, water withdrawals and water returns on an annual basis.  
(see 21.18 and 21.32)

22.10

Title: EVALUATION OF SURFACE WATER DATA-COLLECTION NETWORK FOR ILLINOIS  
P.I. Dean M. Mades, United States Geological Survey  
S.O.F. Cooperative  
F.L.C. C  
Dates: October 1, 1981, through September 30, 1983  
Obj: To document present and future streamflow-data needs; to evaluate available streamflow data to determine if these needs are being met; and to provide guidelines for maintaining a cost-effective surface-water network that satisfies these needs.

22.11

Title: TRITIUM MIGRATION IN A SHALLOW DOLOMITE AQUIFER NEAR CHICAGO, ILLINOIS  
P.I. James R. Nicholas, United States Geological Survey  
S.O.F. United States Geological Survey  
F.L.C. D  
Dates: October 1, 1981, through September 30, 1984  
Obj: To define the hydrologic, geologic, and tritium transport characteristics of the dolomite aquifer and to calibrate and verify a transport model that can assist in management of the aquifer.

22.12

Title: HYDROGEOLOGIC ASSESSMENT OF THE NORTHERN MIDWEST REGIONAL AQUIFER IN ILLINOIS  
P.I. Marvin G. Sherrill, Dean M. Mades, and James R. Nicholas, United States Geological Survey  
S.O.F. United States Geological Survey  
F.L.C. E  
Dates: October 1, 1978, through September 30, 1982  
Obj: To supply needed hydrogeologic data to the Regional Aquifer System Analysis (RASA) while refining our understanding of the deep aquifers in Illinois.

22.13

Title: GROUNDWATER QUALITY OF THE AMERICAN BOTTOMS, ILLINOIS  
P.I. John K. Stamer and David C. Voelker, United States Geological Survey  
S.O.F. United States Geological Survey  
F.L.C. C  
Dates: October 1, 1981, through September 30, 1982  
Obj: To determine baseline groundwater quality; to determine which contaminants occur and areal extent of contamination; and to determine suitability of the groundwater for discharge to surface waters or for other beneficial uses.

22.14

Title: WASTE-LOAD ASSIMILATIVE CAPACITY OF THE SANGAMON RIVER, DECATUR TO SPRINGFIELD, ILLINOIS  
P.I. John K. Stamer and David C. Voelker, United States Geological Survey  
S.O.F. Cooperative  
F.L.C. C  
Dates: April 1, 1982, through September 30, 1982  
Obj: To evaluate the waste-load assimilative capacity for a critical low-flow condition; to compute concentration profiles of constituents including dissolved oxygen; and to evaluate combinations of waste loads from the Decatur wastewater plant and flows from Lake Decatur.

22.15

Title: WATER MONITORING IN COAL-MINING AREAS  
P.I. E. E. Zuehls, United States Geological Survey  
S.O.F. United States Geological Survey  
F.L.C. C  
Dates: October 1, 1978, through September 30, 1983  
Obj: To prepare summary reports that are designed to be useful to coal mine owners and operators, and to others by presenting information about the existing hydrologic conditions and by identifying sources of hydrologic information within selected coal-producing areas of the state.

23. UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN  
Urbana-Champaign, Illinois 61801

23.1

Title: DEVELOPMENT OF HYDROLOGIC AND WATER QUALITY INSTREAM FLOW NEEDS  
ASSESSMENT PROCEDURE FOR ILLINOIS

P.I. Vahid Alavian, Department of Civil Engineering, University of Illinois  
at Urbana-Champaign

S.O.F. Water Resources Center, University of Illinois at Urbana-Champaign

F.L.C. B

Dates: July 1980 through June 1982

Obj: The objective of the study was to calibrate and verify the hydraulic  
simulation component of the U.S. Fish and Wildlife Service's IFG2  
model, developed for the assessment of aquatic habitat in high  
gradient western streams, for typically low gradient midwestern  
streams. It was concluded that the model can be modified and  
calibrated for use in low gradient midwestern streams provided that  
the stagnant water areas are identified and eliminated from the  
calibration data.

23.2

Title: HYDRAULIC AND AQUATIC CHARACTERIZATION OF RECIRCULATING REGIONS  
IN RIVERS

P.I. Vahid Alavian and Edwin E. Herricks, Department of Civil Engineering,  
University of Illinois at Urbana-Champaign

S.O.F. United States Department of the Interior

F.L.C. A

Dates: January 1, 1982, through December 30, 1982

Obj: To experimentally and analytically investigate the hydraulic  
properties (i.e., flow pattern, velocity distribution, and mass  
exchange) of recirculating or partially stagnant regions of rivers and  
streams. The results will be useful in estimating the residence time  
of pollutants trapped in the recirculating regions in an effort to  
more realistically predict the fate of pollutants in rivers and  
streams. In addition, the results will be used in evaluating the  
suitability of recirculating regions as habitat for aquatic life.

23.3

Title: ILLINOIS RURAL WATER DISTRICTS: AN INQUIRY

P.I. D.L. Chicoine, John A. Quinn, and Margaret R. Grossman, Department of Agricultural Economics, University of Illinois at Urbana-Champaign

S.O.F. United States Department of the Interior

F.L.C. B

Dates: July 1981 through June 1983

Obj: The rural water systems or districts of Illinois are being studied from economic, legal, and spatial-planning perspectives. Economic data is being collected to estimate variable operating costs, capital cost, and service demand models. The organization and legal structure of district governing bodies is being investigated. And the implications of the districts' growth for land use planning, population distribution, and other local policies will be identified.

23.4

Title: DESIGNS OF MARKETABLE WATER PERMIT SYSTEMS FOR HUMID REGIONS

P.I. J.W. Eheart and E.D. Brill, Jr., Department of Civil Engineering, University of Illinois at Urbana-Champaign; and Randolph M. Lyon, Department of Economics, University of Texas at Austin

S.O.F. United States Department of the Interior

F.L.C. B

Dates: July 1980 through June 1983

Obj: The objectives of this study are to develop and evaluate systems of rules and regulations for the management of water withdrawals in humid regions. The development of several systems, a thorough investigation of the considerations involved in designing such a system, and a qualitative evaluation of the alternative systems has been completed. In addition, a quantitative comparison of several management systems has been undertaken, using estimated values of water for corn irrigation and water supply (river flow) data for the Little Wabash River at Clay City, Illinois.

23.5

Title: METHODS FOR EVALUATION OF ASSESSMENT OF TRANSFERABLE DISCHARGE PERMITS FOR BIOLOGICAL OXYGEN DEMAND CONTROL

P.I. J. W. Eheart and E. D. Brill, Jr., Department of Civil Engineering, University of Illinois at Urbana-Champaign

S.O.F. National Science Foundation

F.L.C. D

Dates: August 1979 through December 1981

Obj: The objectives of the project are to: develop several environmentally meaningful definition bases for BOD permits and to test each for cost efficiency and equity, ease of implementation, certainty of outcome, and water quality impacts. Several alternative rule sets have been developed and compared. Seemingly attractive rules may include zoning and transfer restrictions.

23.6

Title: PUBLIC WATERS IN ILLINOIS: AN INQUIRY AND ANALYSIS

P.I. Margaret R. Grossman, Department of Agricultural Economics,  
University of Illinois at Urbana-Champaign

S.O.F. Water Resources Center, University of Illinois at Urbana-Champaign

F.L.C. B

Dates: July 1982 through June 1983

Obj: This study is directed at an evaluation of the meaning of "public waters" in Illinois. It examines the judicial and legislative definitions of this term, with emphasis on the ability of state agencies and instrumentalities to develop, conserve, and protect public rights and to regulate the use of water resources. The research compares presently exercised control with potential regulatory power over Illinois waters.

23.7

Title: DEVELOPMENT OF INSTREAM FLOW REQUIREMENTS FOR AQUATIC INSECTS

P.I. Edwin E. Herricks, Department of Civil Engineering, University of  
Illinois at Urbana-Champaign

S.O.F. United States Department of the Interior

F.L.C. C

Dates: October 1980 through September 1983

Obj: The objectives of this project are to identify instream flow needs of aquatic insects and improve the assessment methods for instream flow needs through incorporation of aquatic insect (primary consumer) components. Both laboratory and field studies are being conducted. Initial project activities sought to establish a baseline of information for experimental studies. It is expected that the experimental results will include: (1) identification of current requirements and selectivity of three species of insects; (2) life stage specific microhabitat selection for these species; (3) species associations during the colonization process; (4) effects of periphyton on colonization; and (5) effects of sediment accumulation and organic carbon on aquatic insect distribution in defined hydraulic/flow conditions.

23.8

Title: EFFECTS OF BARGE PASSAGE ON THE NAVIGATION REACH OF THE KASKASKIA RIVER

P.I. Edwin E. Herricks, Department of Civil Engineering, University of  
Illinois at Urbana-Champaign

S.O.F. Upper Mississippi River Basin Commission

F.L.C. C

Dates: March 1981 through September 1981

Obj: An experimental study was conducted by observing the effect of barge passage on physical, chemical, and biological conditions in a reach of the Kaskaskia navigation channel typically not used for transportation. Results indicated increased suspended solids and invertebrate drift activity associated with barge passage. Differences were noted between upstream and downstream passage effects. Effects also differed between low-flow and high-flow conditions.

23.9

Title: STATE OF ILLINOIS WATER QUALITY MANAGEMENT INFORMATION SYSTEM - BIOLOGICAL COMPONENT

P.I. Edwin E. Herricks, Department of Civil Engineering, University of Illinois at Urbana-Champaign

S.O.F. Illinois Environmental Protection Agency

F.L.C. C

Dates: 1979 through June 1981

Obj: An interactive computer-based system was developed to provide information on fisheries habitat and water quality requirements, as well as statewide fisheries distribution information. Habitat requirements were developed through use of hydraulic geometry equations. Fish species preference for depth, velocity, substrate type, as well as changing preference for spawning, were provided in a fisheries matrix. Fisheries distribution information for each of the 18 river basins in Illinois was provided in relation to seven watershed area categories. The final report on the project has been submitted.

23.10

Title: ILLINOIS INSTREAM FLOW NEEDS ASSESSMENT (KANKAKEE)

P.I. Edwin E. Herricks and J. Wayland Eheart, Department of Civil Engineering, University of Illinois at Urbana-Champaign

S.O.F. Illinois Department of Transportation

F.L.C. C

Dates: June 30, 1981, through June 30, 1982

Obj: Specific framework studies contemplated as part of this research for Kankakee River instream flow needs assessment include analysis of withdrawal needs and potentials, compilation of other pertinent data, and support for detailed instream flow assessment activities.

23.11

Title: ILLINOIS INSTREAM FLOW NEEDS ASSESSMENT (SANGAMON)

P.I. Edwin E. Herricks and J. Wayland Eheart, Department of Civil Engineering, University of Illinois at Urbana-Champaign

S.O.F. Title III Federal Grant and Illinois Department of Transportation

F.L.C. C

Dates: July 1981 - on hold

Obj: Specific framework studies contemplated as part of this research for Sangamon River instream flow needs assessment include analysis of withdrawal needs and potentials and continuing development of instream flow assessment methodologies. Specifically, a methodology is being developed for extrapolation of habitat values for streams of small size.

23.12

Title: ILLINOIS STATEWIDE INSTREAM FLOW NEEDS ASSESSMENT

P.I. Edwin E. Herricks and J. Wayland Eheart, Department of Civil Engineering, University of Illinois at Urbana-Champaign

S.O.F. Illinois Department of Transportation

F.L.C. D

Dates: 1979 and continuing

Obj: The continuation of the assessment of instream flow needs in all major river basins in Illinois has included evaluation of instream flow needs for the Rock River basin. Research has included framework development of analysis techniques and analysis of water use patterns in the basin. Hydrologic models were calibrated to data from three reaches in the Rock River basin. Through the use of the U.S. Fish and Wildlife Service incremental methodology, habitat frequency information has been developed for each reach for several important fish species. Comprehensive analysis has included water quality and quantity investigations.

23.13

Title: TESTING OF MITIGATION STRUCTURES IN NAVIGATION CANALS

P.I. Edwin E. Herricks and Vahid Alavian, Department of Civil Engineering, University of Illinois at Urbana-Champaign

S.O.F. University of Illinois

F.L.C. A

Dates: January 1982 through December 1982

Obj: Research is being conducted to determine optimum configurations for structures that will mitigate the loss of habitat created by canalization of the Kaskaskia River. A physical-hydraulic model has been constructed and detailed studies are underway to determine the effectiveness of bank notching to provide shallow water habitat protected from high-velocity conditions. A number of channel deflection structures will be tested to determine the factors that will control sedimentation and scour to maintain proper habitat conditions.

23.14

Title: INFLUENCE OF CHLORINATION AND THE DISTRIBUTION SYSTEM ON MUTAGENS IN A POTABLE WATER SUPPLY

P.I. James B. Johnston, Institute for Environmental Studies, University of Illinois at Urbana-Champaign

S.O.F. United States Department of the Interior

F.L.C. C

Dates: July 1979 through March 1982

Obj: This study examined the distribution system of a central Illinois water supply as a source of mutagens in potable water. Both pro-mutagens and chlorination-related, direct-acting mutagens were recovered by absorption on polyurethane foam and quantitated by the Ames *Salmonella*/microsome reversion assay. Assays indicated that the promutagens originated in the distribution system and that the direct-acting activity increased somewhat within it. Hypotheses on the origins of these mutagens are being examined further.

23.15

Title: INDEX OF BIOTIC INTEGRITY FOR USE IN ASSESSMENT OF WATER RESOURCE QUALITY

P.I. James R. Karr, Department of Ecology, Ethology and Evolution, University of Illinois at Urbana-Champaign

S.O.F. United States Environmental Protection Agency

F.L.C. D

Dates: October 1981 through December 1982

Obj: Test a recently developed multiparameter Index of Biotic Integrity using fish communities. The index is being evaluated in streams from the Dakotas and Nebraska to Michigan, Indiana, and Kentucky.

23.16

Title: HABITAT STRUCTURE AND FISH COMMUNITIES IN WARMWATER STREAMS

P.I. James R. Karr, Department of Ecology, Ethology and Evolution, University of Illinois at Urbana-Champaign

S.O.F. United States Environmental Protection Agency

F.L.C. D

Dates: November 1978 through November 1982

Obj: Identify the proximate and ultimate factors responsible for organization of fish communities with special emphasis on role of habitat structure, food availability, predation, and aspects of land use.

23.17

Title: PHYSICAL CRITERIA FOR AQUATIC HABITATS NECESSARY TO ACHIEVE FISHABLE WATERS IN MIDWEST STREAMS

P.I. James R. Karr, Department of Ecology, Ethology and Evolution, University of Illinois at Urbana-Champaign

S.O.F. United States Environmental Protection Agency

F.L.C. C

Dates: October 1980 through April 1982

Obj: Develop a "state-of-the-art" synthesis on the importance of physical characteristics of aquatic habitats to the structure of fish communities in midwest streams. A final report, now in review by USEPA, outlines the changes in the fish faunas of midwestern streams and their causes during the last 130 years. In addition, a detailed review of hydrological and biotic processes affecting physical habitat is provided along with detailed guidelines and recommendations for protection of stream habitat. The final report is entitled Habitat Preservation for Midwest Stream Fishes: Principles and Guidelines.

23.18

Title: AQUEOUS OZONATION OF COMPLEX HYDROCARBON MIXTURES

P.I. Richard A. Larson, Institute for Environmental Studies, University of Illinois at Urbana-Champaign

S.O.F. Water Resources Center, University of Illinois at Urbana-Champaign

F.L.C. B

Dates: July 1, 1982, through June 30, 1983

Obj: A comparison of the chemical reactivity of ozone toward an environmentally realistic mixture (water-soluble compounds from petroleum) at different pHs. Ozonation is frequently used for water treatment and waste treatment.

23.19

Title: DRAINABILITY OF THE HIGH CLAY CONTENT SOILS WITH A RESTRICTIVE LAYER

P.I. W. D. Lembke and C.J.W. Drablos, Department of Agricultural Engineering, University of Illinois at Urbana-Champaign

S.O.F. United States Soil Conservation Service

F.L.C. C

Dates: Current

Obj: Nine soils are being evaluated to determine their subsurface drainability. The evaluation procedure includes saturating a field soil profile and measuring drain outflow and water table drawdown.

23.20

Title: EFFICIENT WATER MANAGEMENT ON CLAYPAN SOIL IN ILLINOIS

P.I. W. D. Lembke, C.J.W. Drablos, and M. D. Thorne, Department of Agricultural Engineering, University of Illinois at Urbana-Champaign

S.O.F. United States Department of the Interior

F.L.C. C

Dates: October 1980 through December 1983

Obj: The combined effect of all aspects of water management are being analyzed for corn and soybeans on claypan soil field test plots in south central Illinois.

23.21

Title: LAKE BED SEDIMENTS FOR AGRICULTURAL PRODUCTION: TECHNIQUES AND WATER QUALITY IMPLICATIONS

P.I. W. D. Lembke and J. K. Mitchell, Department of Agricultural Engineering, University of Illinois at Urbana-Champaign; and M. J. Barcelona, Illinois State Water Survey, Champaign

S.O.F. United States Department of Agriculture and Illinois Department of Agriculture

F.L.C. B

Dates: September 30, 1981, through September 30, 1986

Obj: Sediment from Illinois lakes is being studied to determine economical ways of returning the sediment to agricultural production with a minimum impact on lake water quality.

23.22

Title: SEDIMENT YIELD FROM SMALL WATERSHED AREAS IN ILLINOIS

P.I. W. D. Lembke, J. K. Mitchell, and S. W. Park, Department of Agricultural Engineering, University of Illinois at Urbana-Champaign

S.O.F. United States Department of Agriculture

F.L.C. C

Dates: September 30, 1979, through September 30, 1983

Obj: Sediment transport models are being developed and validated for small (less than 40 ha) watersheds in Illinois.

23.23

Title: SOIL AND WATER CONTROL SYSTEMS APPLIED TO ILLINOIS

P.I. W. D. Lembke and J. K. Mitchell, Department of Agricultural Engineering, University of Illinois at Urbana-Champaign

S.O.F. United States Department of Agriculture

F.L.C. B

Dates: September 1978 through September 1982

Obj: Both laboratory and field experiments are being conducted to determine the effect of irrigation and drainage on plant growth and production.

23.24

Title: TREATMENT SYSTEMS FOR LIVESTOCK WASTES AND RURAL HOME SEWAGE

P.I. W. D. Lembke, D. L. Day, and D. H. Vanderholm, Department of Agricultural Engineering, University of Illinois at Urbana-Champaign

S.O.F. United States Department of Agriculture

F.L.C. B

Dates: September 30, 1981, through September 30, 1986

Obj: Emphasis is placed on low cost systems for areas where soils limit the practicality of conventional waste treatment.

23.25

Title: IMPROVED OPTIMIZATION TECHNIQUES FOR THE DESIGN OF WASTEWATER TREATMENT SYSTEMS

P.I. John T. Pfeffer, Department of Civil Engineering, University of Illinois at Urbana-Champaign

S.O.F. Water Resources Center, University of Illinois at Urbana-Champaign

F.L.C. A

Dates: July 1982 through July 1983

Obj: This study will investigate the optimization of treatment systems using unit process models that can accurately predict performance. Cost considerations will include both capital costs and operating and maintenance costs. An optimization technique commensurate with the sophistication of the process models will be utilized.

23.26

Title: THE EFFECT OF DIFFERENT SOIL TYPES ON THE MUTAGENIC PROPERTIES OF WASTE WATER

P.I. Michael J. Plewa and Philip K. Hopke, Institute for Environmental Studies, University of Illinois at Urbana-Champaign

S.O.F. Water Resources Center, University of Illinois at Urbana-Champaign

F.L.C. B

Dates: March 1982 through June 1983

Obj: The objectives of this study are (1) to analyze the effects of agriculturally important soil types on the mutagenicity of a chemically defined waste water, (2) to determine the carrying capacity of each soil type for different classes of mutagens removed from the waste water, (3) to determine if these mutagens can be taken up by corn plants and induce mutations in somatic and germinal cells, and (4) to predict the possible risks associated with the disposal of waste waters on agricultural lands that may result in contamination of groundwater supplies.

23.30

Title: REMOVAL OF BARIUM AND RADIUM FROM GROUNDWATER

P.I. Vernon L. Snoeyink, Department of Civil Engineering, University of Illinois at Urbana-Champaign

S.O.F. United States Environmental Protection Agency

F.L.C. D

Dates: September 1981 through September 1983

Obj: The objective of the proposed research is to determine whether weak acid ion exchangers with carboxylic functional groups can be used to remove  $Ba^{2+}$  and  $Ra^{226}$  as well as carbonate hardness. The procedure will involve the use of batch tests to determine selectivity, and column tests to determine capacity and regeneration requirements. Strong acid polystyrene resins will be tested similarly for comparison.

23.31

Title: TRANSFER FUNCTION MODEL FOR STOCHASTIC WATERSHED SYSTEM

P.I. Arni Snorrason and W. Hall C. Maxwell, Department of Civil Engineering, and Paul Newbold, Department of Economics, University of Illinois at Urbana-Champaign

S.O.F. University of Illinois

F.L.C. A

Dates: November 20, 1981, through December 31, 1982

Obj: The theoretical basis for the methodology is the theory of stochastic processes and multivariate time series theory. The practical basis for the study is the improvement of intermediate and long-term forecasting of riverflow and other hydrologic processes. Estimates and evaluations are made of possible relationships between the hydrological process of interest and other hydrological and meteorological processes, e.g., riverflow and precipitation, temperature and groundwater levels.

23.32

Title: MICROBIAL ATTACHMENT PROPERTIES IN EXPANDED-BED, ACTIVATED CARBON ANAEROBIC FILTERS

P.I. Makram T. Suidan and Bruce E. Rittmann, Department of Civil Engineering, University of Illinois at Urbana-Champaign

S.O.F. United States Department of the Interior

F.L.C. B

Dates: January 1982 through December 1982

Obj: The objective of this study is to evaluate the relative influences of residual organic concentration and turbulence due to liquid and gas mixing on the performance of a completely mixed, expanded-bed, granular activated carbon, anaerobic filter. The results of this research can improve our understanding of biofilms and the growth and attachment characteristics of Methanogenic organisms.

23.33

Title: GROUNDWATER POLLUTION BY GAS-PHASE TRANSPORT OF CONTAMINANTS THROUGH THE VADOSE ZONE

P.I. Albert J. Valocchi, Department of Civil Engineering, University of Illinois at Urbana-Champaign

S.O.F. Water Resources Center, University of Illinois at Urbana-Champaign

F.L.C. B

Dates: April 1, 1982, through June 30, 1983

Obj: To determine the importance of air-phase transport of volatile organic contaminants through the vadose zone as a potential pathway for pollution of shallow groundwater aquifers.

23.34

Title: VALIDITY OF THE LOCAL CHEMICAL EQUILIBRIUM ASSUMPTION FOR MODELING SOLUTE TRANSPORT THROUGH HETEROGENEOUS AQUIFERS

P.I. Albert J. Valocchi, Department of Civil Engineering, University of Illinois at Urbana-Champaign

S.O.F. National Science Foundation

F.L.C. C

Dates: June 1, 1982, through November 30, 1984

Obj: To study the microscopic and macroscopic mass transfer processes governing the advection, dispersion, and diffusion of adsorbing solutes in stratified, heterogeneous aquifers. To specify the conditions under which chemical and diffusion kinetic phenomena can be approximated by a local equilibrium assumption.

23.35

Title: EROSION AND SEDIMENT CONTROL ON ILLINOIS FARMLAND: THE FARMER IN CONFLICT WITH SOCIETY

P.I. J.C. van Es, Department of Agricultural Economics, University of Illinois at Urbana-Champaign

S.O.F. Water Resources Center, University of Illinois at Urbana-Champaign

F.L.C. B

Dates: July 1982 through September 1983

Obj: (1) To ascertain the current state of adoption of soil erosion and sediment control practices among Illinois farmers; (2) to measure farmer values and attitudes with regard to soil erosion and sedimentation; (3) to develop statistical models of the relationships between farm firm economic conditions, agronomic conditions, and the relevant farmer values and attitudes in explaining erosion control behavior; (4) to identify conflict and convergence between farmer values, attitudes, and behavior related to soil erosion and sedimentation; and (5) to suggest modifications in existing educational programs to bring about behavior change among farmers in light of the farmers' decision-making patterns.

24. WAPORA, INC.  
35 East Wacker Drive, Suite 450, Chicago, Illinois

24.1

Title: CONSTRUCTION IMPACTS ON NATURAL CONDITIONS OF ILLINOIS STREAMS

P.I. WAPORA, Inc.

S.O.F. Federal Emergency Management Agency, via Illinois Department of Transportation

F.L.C. C

Dates: January 1982 through September 1982

Obj: Review of existing methodology for prediction of construction impacts on stream's natural conditions and selection/development of most appropriate method for use by Illinois Department of Transportation's Division of Water Resources and others for impact analysis of construction proposed in or near Illinois rivers and streams.

## SUBJECT INDEX

## AGRICULTURE

attitudes toward soil  
erosion 23.35

best management practices -  
see EROSION AND SEDIMENTATION

climate information 21.24

irrigation 20.3, 21.32,  
23.20, 23.23

Lake Michigan diversion 6.1

mutagens 23.26

soil amendments 11.5, 11.6,  
23.21, 23.26

soil drainage 23.19, 23.20,  
23.23

## AQUATIC AND RIPARIAN HABITAT:

algae 12.7

benthos 12.7, 12.11, 12.12,  
12.14, 12.16, 21.17

biomanipulation 12.4

channel modification 8.1,  
23.13

Chicago Metropolitan Area  
11.1, 11.8 - see also  
WATER QUALITY, CHICAGO  
METROPOLITAN AREA

construction 24.21

effects of barge traffic 23.8

fish 11.1, 12.4, 12.7, 12.8,  
12.9, 12.10, 12.13, 23.9,  
23.16, 23.17

instream flow needs 23.1,  
23.7, 23.10, 23.11, 23.12

invertebrates 2.2, 12.2, 12.11,  
12.12, 12.14, 21.17, 23.7, 23.8

Lake Michigan diversion 12.5,  
12.6, 12.9, 12.11, 21.13

Lakes - see LAKES, LIMNOLOGY

low flow conditions 22.14

macrophytes 12.4, 12.16

periphyton 2.1, 23.7

plankton 12.7

power plant cooling  
reservoirs 2.1, 2.2, 12.7

river ecosystems 11.1, 12.15

sewage 4.1

Schaumburg Station Wetlands  
20.4

streams and rivers - see STREAMS,  
RIVERS

water fowl 12.1, 12.5, 12.6

water quality - see WATER QUALITY

wetlands 10.2, 17.1, 20.4

## ATMOSPHERIC CHANGES AND MANAGEMENT:

aerosols 21.16

atmospheric deposition 5.1, 21.15,  
21.16, 21.34, 21.38

information dissemination 21.24

rainfall fluctuations 21.23

weather modification 21.8

## DRAINAGE, RUNOFF, WATERSHEDS:

erosion, sedimentation - see EROSION,  
SEDIMENTATION

flood stage 21.26

hydrographs 22.3

sediment transport - see EROSION,  
SEDIMENTATION

soil drainage 23.19, 23.20, 23.21,  
23.22, 23.23

stochastic processes 23.31

strip mining 22.2, 22.8

urban runoff 8.7, 21.39

waste disposal sites 22.6

watershed drainage 21.26

## ENERGY:

mining water treatment 15.1, 18.1

nuclear power plant discharge 11.2

## ENERGY: (cont.)

ocean thermal energy conversion, 1.2  
 power plant cooling reservoirs, 2.1,  
 2.2, 12.7  
 strip-mine lakes 19.1, 22.2  
 strip-mined land 11.5, 11.6, 12.7,  
 22.2, 22.8, 22.15  
 utility wastes 15.2

## EROSION, SEDIMENTATION:

best management practices 8.3, 8.4,  
 8.5, 21.10, 21.27, 21.28  
 dredged material disposal 1.3  
 farmer attitudes 23.35  
 lake sedimentation 8.3, 8.5, 21.28  
 models 21.4, 23.22  
 sediment - see WATER QUALITY  
 sediment transport 1.3, 8.3,  
 8.4, 8.5, 21.7, 21.26, 21.27,  
 21.28, 22.4, 23.22  
 waste disposal sites 22.6  
 water quality monitoring 8.3,  
 8.4, 8.5, 21.7, 21.27, 21.28

## FLOODS, FLOOD MITIGATION:

drainage 21.26  
 floodplain information 21.25  
 resident education 16.1  
 wetlands 17.1

## FLOW, HYDRAULICS:

dispersion 22.5  
 groundwater flow 22.1, 22.7,  
 22.11  
 Lake Michigan Diversion - see  
 GREAT LAKES  
 pollutant transport 21.5  
 sediment transport - see  
 EROSION, SEDIMENTATION  
 solute transport 15.2, 20.3,  
 21.29, 22.1, 23.33, 23.34

stochastic processes 23.31

streamflow 8.6, 21.37, 21.40,  
 21.41, 22.5, 23.2, 23.7, 23.31

waste disposal sites 22.7

## GREAT LAKES:

Lake Michigan diversion 6.1, 8.6,  
 12.5, 12.6, 12.9, 12.11, 21.11,  
 21.13, 21.35, 21.37, 21.43

pollution 5.1, 11.2, 11.4

## GROUNDWATER:

American Bottoms 21.33, 22.13

aquifer characteristics 14.1,  
 14.3, 20.2, 21.42, 22.11, 22.12  
 22.13

Cambro-Ordovician aquifer  
 (northern Illinois) 14.1, 14.3,  
 20.2, 21.42, 21.43

contamination 21.29, 21.46, 22.1,  
 22.7, 22.13, 23.26

Elgin wells 15.3

management 8.2, 21.33, 21.46

models 21.29, 21.33, 22.11, 23.34

monitoring 21.2

quality 8.2, 21.42, 21.46, 22.13

radioactivity 20.1, 22.1, 22.7

resource assessment 8.2, 20.2, 21.31,  
 21.32, 21.42, 21.43, 22.12

solute transport 15.2, 21.29, 22.1,  
 23.33, 23.34

stochastic processes 23.31

sulfur removal 15.3

surface water/groundwater interaction  
 8.2, 21.31

waste disposal 20.3, 22.1

## LAKES, LIMNOLOGY:

aquatic vegetation control 12.4

biomanipulation 12.4

Braidwood Cooling Pond 12.7

## LAKES, LIMNOLOGY: (cont.)

Frank Holten Lake 12.3

Great Lakes - see GREAT LAKES

Highland Silver Lake 8.3, 21.28

Johnson Sauk Trail Lake 21.21

Lake Catherine 21.20

Lake Decatur 22.14

Lake Eureka 21.19

Lake Le-Aqua-Na 21.22

Lake of the Woods 21.36

lake management 21.3, 21.19, 21.20, 21.21, 21.22

lake restoration 12.3, 21.19, 21.20, 21.21, 21.22, 21.36, 23.21

Lake Shelbyville 12.16

power plant cooling ponds - see ENERGY

sedimentation - see EROSION, SEDIMENTATION

strip-mine lakes 19.1

water quality 8.3, 12.3, 12.16, 21.3, 21.19, 21.20, 21.36, 22.21

## NAVIGATION:

commodities 3.1, 7.1

ecological effects of navigation 23.8, 23.13

terminals 3.1, 7.1, 7.2

## OCEANS:

kelp farming 1.1

thermal energy conversion 1.2

## STREAMS, RIVERS:

Blue Creek, Pike County 21.27

Bureau Creek 21.26

Chicago Waterway 21.37

Court Creek 21.10

Des Plaines River 17.1, 21.37

Dupage River 13.1, 21.37

Fox River 21.37, 21.43

Illinois River 12.12, 12.13, 12.14, 12.15, 21.11, 21.12, 21.13, 21.17, 21.35, 21.37

Kankakee River 12.7, 23.8, 23.10

Kaskaskia River 12.16

Little Wabash River 23.3

Mississippi River 1.3

Okaw River 12.16

Sangamon River 8.2, 21.31, 22.14, 23.11

## WATER DISTRIBUTION SYSTEMS:

corrosion 21.30

microbiological alterations of water quality 9.3

mutagens 23.14

## WATER MANAGEMENT, INSTITUTIONS, LAWS, ECONOMICS:

data collection and monitoring 22.10

erosion control education 23.35

marketable water permit systems 23.4

models 21.40

reservoir management 21.41

resource assessment 21.31, 21.40, 21.41, 22.9

transferable discharge permits 23.5

water districts 23.3

water use law 23.6

water withdrawal data 21.18, 21.32, 22.9

## WATER QUALITY:

aeration 11.7, 21.19, 21.20

## WATER QUALITY: (cont.)

bacteria 11.3, 12.16, 21.12  
 channel modification 8.1, 23.13  
 chemicals 12.14, 12.16  
 Chicago Metropolitan Area 11.1, 11.2, 11.3, 11.4, 11.7, 11.8, 11.9, 21.37  
 dissolved solids 11.2, 12.16  
 atmospheric deposition - see  
 ATMOSPHERIC CHANGES AND MANAGEMENT  
 fish - see AQUATIC AND RIPARIAN  
 HABITAT  
 groundwater contamination 8.2, 20.3, 21.29, 21.46, 22.7, 22.13  
 heavy metals 12.14, 21.12, 21.44  
 Lake Michigan 11.2, 11.4  
 Lake Michigan diversion 8.6, 21.11, 21.13, 21.35, 21.37  
 lakes - see LAKES, LIMNOLOGY  
 management 8.2, 8.3, 8.4, 8.5, 8.7, 13.1, 21.10, 22.9  
 nonpoint source pollution 8.5, 20.3, 21.4, 21.10, 21.27, 21.28  
 pollution 5.1, 12.11, 12.12, 12.14  
 radioactivity 20.1, 22.6, 22.7  
 recirculating regions of streams 23.2  
 sediment 12.11, 12.12, 12.14, 21.1, 21.3, 21.4, 21.9, 21.11 - see also  
 EROSION AND SEDIMENTATION  
 sewage 4.1, 11.5, 11.6, 18.2, 21.12  
 standards 13.1, 21.30  
 toxicological assays 21.44, 21.45  
 urban runoff 8.5, 8.7, 21.12, 21.39  
 waste-load capacity of streams 22.14

ecological impacts 18.2, 21.9, 22.14

livestock wastes 23.24

mining water treatment - see  
ENERGY

metal speciation 9.2

mutagens 23.14, 23.18, 23.26

ozonation 23.18

radium removal 23.30

rotating biological  
contactors 21.14

small-scale treatment  
alternatives 10.1, 23.24

sorption/desorption processes  
9.5

sulfur removal 15.3

system design 23.25

wastewater treatability 9.4

## WATER TREATMENT, WASTE TREATMENT:

activated carbon 9.3, 23.29, 23.32  
 bacterial films 9.6, 23.28, 23.32  
 barium removal 23.30  
 chlorine 23.27, 23.29

Case	Age	Sex	Occupation	Duration of Illness	Site of Lesion	Microscopic Findings	Diagnosis
1	45	M	Farmer	10 years	Right lower leg	Chronic inflammation with many eosinophils	Eosinophilic cellulitis
2	55	F	Homemaker	5 years	Left lower leg	Chronic inflammation with many eosinophils	Eosinophilic cellulitis
3	65	M	Retired	15 years	Right lower leg	Chronic inflammation with many eosinophils	Eosinophilic cellulitis
4	75	F	Retired	20 years	Left lower leg	Chronic inflammation with many eosinophils	Eosinophilic cellulitis
5	85	M	Retired	25 years	Right lower leg	Chronic inflammation with many eosinophils	Eosinophilic cellulitis
6	95	F	Retired	30 years	Left lower leg	Chronic inflammation with many eosinophils	Eosinophilic cellulitis
